|---------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <u>Roy L. Adler</u> : F-expansions revisited .....                                                                                          | 1   |
| <u>Joseph Auslander</u> : Non-compact dynamical systems .....                                                                               | 6   |
| <u>Louis Auslander</u> : Ergodic G-induced flows on<br>compact solvmanifolds .....                                                          | 12  |
| <u>Prem N. Bajaj</u> : Products of semi-dynamical systems .....                                                                             | 23  |
| <u>Anatole Beck</u> : Uniqueness of flow solutions of<br>differential equations .....                                                       | 30  |
| <u>Rufus Bowen</u> : Symbolic dynamics for hyperbolic<br>systems .....                                                                      | 51  |
| <u>James R. Brown</u> : Monothetic automorphisms of a<br>compact abelian group .....                                                        | 59  |
| <u>Hsin Chu</u> : On the embedding problem and the<br>Hilbert-Smith conjecture .....                                                        | 78  |
| <u>Robert Ellis</u> : A group associated with an extension ....                                                                             | 86  |
| <u>Harry Furstenberg</u> : The unique ergodicity of<br>the horocycle flow .....                                                             | 95  |
| <u>L. Wayne Goodwyn</u> : How should we define topological<br>entropy ? .....                                                               | 116 |
| <u>Walter Gottschalk</u> : Some general dynamical notions .....                                                                             | 120 |
| <u>Leon W. Green</u> : Group-like decompositions of<br>Riemannian bundles .....                                                             | 126 |
| <u>Otomar Hajek</u> : Non-minimality of 3-manifolds .....                                                                                   | 140 |
| <u>Shizuo Kakutani</u> : Examples of ergodic measure preserving<br>transformations which are weakly mixing but not<br>strongly mixing ..... | 143 |
| <u>Joseph F. Kent</u> : Locally connected almost periodic<br>minimal sets .....                                                             | 150 |

|                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------|-----|
| <u>Harvey B. Keynes and Dan Newton:</u> Choquet theory and<br>ergodic measures for compact group extensions .....           | 167 |
| <u>Ping-Fun Lam:</u> The intermediate transformation groups .....                                                           | 174 |
| <u>Wayne Lawton:</u> The structure of compact connected<br>groups which admit an expansive automorphism .....               | 182 |
| <u>Nelson G. Markley:</u> Characteristic sequences .....                                                                    | 197 |
| <u>D. McMahon and T. S. Wu:</u> Relative equicontinuity and<br>its variations .....                                         | 201 |
| <u>John C. Oxtoby:</u> Approximation by measure-preserving<br>homeomorphisms .....                                          | 206 |
| <u>William Parry:</u> Class properties of dynamical systems .....                                                           | 218 |
| <u>Karl Petersen:</u> Spectra of induced transformations .....                                                              | 226 |
| <u>F. Rhodes:</u> Asymptotic cycles for discontinuous flows .....                                                           | 231 |
| <u>Richard Sacksteder:</u> Abelian semi-groups of expanding<br>maps .....                                                   | 235 |
| <u>Leonard Shapiro:</u> Irregularities of distribution<br>in dynamical systems .....                                        | 249 |
| <u>William A. Veech:</u> Minimal sets and Souslin sets .....                                                                | 253 |
| <u>Peter Walters:</u> Some results on the classification<br>of non-invertible measure-preserving transfor-<br>mations ..... | 266 |
| <u>Benjamin Weiss:</u> Groups of measure preserving trans-<br>formations .....                                              | 277 |
| <u>R. F. Williams:</u> Classification of subshifts of finite<br>type .....                                                  | 281 |
