

## CONTENTS

### OPENING SESSION

Chairman: H. Lipps

- The future of higher level languages (in teaching), (invited paper)  
A. Ralston 1

### THEORY OF COMPUTATION

Chairmen: H. Stetter (Plenary Session)  
E. Engeler (Parallel Session)

- Description of processes, (invited paper)  
P. Deussen 11
- General context-free parsing in time  $n^2$ ,  
M. Snelling 19
- Recursive functions not dependent on the computational rules,  
G. de Michelis 25
- Listing the functional digraph structures,  
C. Böhm, M. Dezani-Ciancaglini 33
- Functions describing interactive programming,  
I. Kupka, N. Wilsing 41

### PROGRAMMING METHODS

Chairmen: S. Crespi-Reghizzi (Plenary Session)  
N. Wirth (Parallel Session)

- From programming techniques to programming methods, (invited paper)  
N. Wirth 47
- Some experiments in improving program documentation,  
R.S. Scowen, A.R. Lawrence 55
- Programming by selection,  
H. -J. Hoffmann 59
- Holon programming,  
P.A. de Marneffe, D. Ribbens 67

### PROGRAMMING LANGUAGES

Chairman: M. Tienari (Parallel Session)

- ALEPH, A Language Encouraging Program Hierarchy,  
R. Bosch, D. Grune, L. Meertens 73
- Interactive structured programming,  
R. Schild 81
- Identification of syntax-directed translation schemes,  
A. Celentano, P. Della Vigna, C. Ghezzi, F. Tisato 85

## COMPILERS

Chairman: H.J. Hoffmann (Parallel Session)

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| The method of structured programming applied to the development of a compiler,<br>U. Ammann      | 93  |
| Optimized translation process, application to ALGOL 68,<br>P. Branquart, J.P. Cardinael, J. Lewi | 101 |
| The NAG library and its special function chapter,<br>J.L. Schonfelder                            | 109 |
| A method for defining and implementing PL/1,<br>P. Chatelin, B. Willis                           | 117 |

## OPERATING SYSTEMS

Chairmen: G.R. Macleod (Plenary Session)

R.M. Needham (Parallel Session)

|                                                                                               |     |
|-----------------------------------------------------------------------------------------------|-----|
| Protection - A current research area in operating systems, (invited paper)<br>R.M. Needham    | 123 |
| The formal semantics of operating systems,<br>E.J. Neuhold                                    | 127 |
| Deadlock prevention in real time systems,<br>A. van Lamsweerde                                | 135 |
| ORION - The OMEGA remote interactive on-line system,<br>R.D. Russell, P. Sparrman, M. Krieger | 143 |

## CONCURRENT PROCESSES AND RESOURCE ALLOCATION

Chairman: J.D. Haupt (Parallel Session)

|                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Description and asynchronous implementation of control structures for<br>concurrent systems,<br>F. Grandoni, P. Zerbetto                        | 151 |
| A semantic approach to the theory of parallel processes,<br>G. Belpaire, J.P. Wilmotte                                                          | 159 |
| An approach to the communication and synchronization of processes,<br>H.A. Schmid                                                               | 165 |
| Approximate "open" priority queue model for determining total delay including<br>overhead in a real-time virtual memory system,<br>P.A. Johnson | 173 |

## SIMULATION AND SYSTEM MEASUREMENTS

Chairman: E. Gelenbe (Parallel Session)

|                                                                                                      |     |
|------------------------------------------------------------------------------------------------------|-----|
| An interactive facility for process-oriented simulations,<br>K.G. Müller                             | 179 |
| Selecting the components of multi-purpose computer systems,<br>S.E. Sutcliffe                        | 187 |
| OSSYOSCOPE: System on auxiliary processors for measuring operating systems,<br>L. Boi, J.P. Drucbert | 195 |

## COMPUTER DESIGN

Chairman: F.H. Sumner (Plenary and Parallel Sessions)

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| Hardware innovation and computer design, (invited paper)<br>D.B.G. Edwards          | 201 |
| System design for scientific computation,<br>B.D. Shriver                           | 211 |
| Multiunit register-transfer networks and pipeline concurrency,<br>J.C. Huang        | 217 |
| Fault-tolerant computing by using residue number systems,<br>F. Barsi, P. Maestrini | 225 |
| High performance input/output channels,<br>H. Spreen                                | 231 |

## MICROPROGRAMMING

Chairman: D.G.B. Edwards (Parallel Session)

|                                                                                          |     |
|------------------------------------------------------------------------------------------|-----|
| The significance of microprogramming,<br>R.F. Rosin                                      | 237 |
| Microprogramming. A hardware point of view,<br>P. -E. Danielsson                         | 243 |
| Logical organization of a problem-oriented microprogram-controlled processor,<br>N. Haff | 251 |
| Procedural decision tables and their implementation,<br>R. Thurner, K. Bauknecht         | 259 |

## NETWORKS

Chairman: M. Engeli (Parallel Session)

|                                                                                                                                               |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Synchronization problems in a computer network,<br>M. Somia                                                                                   | 265 |
| Introduction to POLI network design,<br>C. Ghezzi, G. Le Moli, L. Mezzalira                                                                   | 271 |
| "DATAPORT" - A control system for computer networks designed by the Inland<br>Revenue (Finanzverwaltung) in Nordrhein-Westfalen,<br>M. Molloy | 279 |

## ON-LINE APPLICATIONS

Chairman: F.L. Nicolet (Parallel Session)

|                                                                                                                                                                                                  |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| SO, A low level systems implementation language,<br>B. Krieg, R. Gnat, R. Hoellerer                                                                                                              | 285 |
| CARINE - A multi-user real-time system for control and data acquisition of neutron<br>beam experiments,<br>A. Barthélemy, W. Kaiser, M. Le Sourne, M. Taeschner, P. Darier, A. Vinit, J.J. Girod | 291 |
| Process control system for test stand data acquisition and control in an automotive<br>company,<br>R. Bender, H. Reiter                                                                          | 299 |

## NUMERICAL MATHEMATICS

Chairman: H.J. Stetter (Plenary and Parallel Sessions)

|                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Problems related to the numerical treatment of stiff differential equations, (invited paper)<br>G. Dahlquist                               | 307 |
| On the control of floating-point mantissa length in iterative computations,<br>M. Tienari                                                  | 315 |
| Computing analytical functions by means of power series or continued fractions,<br>J. Patry, S. Gupta                                      | 323 |
| The method of moments. A class of methods for the solution of nonlinear equations<br>and systems of equations,<br>D. Trigiante, S. Ciucani | 331 |

## APPLIED MATHEMATICS

Chairman: G. Dahlquist (Parallel Session)

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| La méthode frontale pour la résolution des systèmes linéaires,<br>M. Frémond        | 337 |
| Finite-element-type solution of integral equations,<br>R. Wait                      | 345 |
| An application of optimal control theory to a problem of hydrodynamics,<br>J. Henry | 349 |

## PATTERN RECOGNITION METHODS

Chairman: P. Zanella (Plenary and Parallel Sessions)

|                                                                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Problems in automatic pattern recognition, (invited paper)<br>H. Kazmierczak                                                                                  | 357 |
| Reconstruction of binary pattern from a few projections,<br>G.T. Herman                                                                                       | 371 |
| Using the minimum spanning tree to recognize dotted and dashed curves,<br>C.T. Zahn                                                                           | 381 |
| Résultats récents concernant la méthode des nuées dynamiques et application<br>à la recherche de profils biologiques,<br>G. Sandor, E. Diday, Y. Lechevallier | 389 |

## PATTERN RECOGNITION APPLICATIONS

Chairman: H. Kazmierczak (Parallel Session)

|                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Computer identification of white blood cells,<br>P.W. Neurath, J.F. Brenner, W.D. Selles, E.S. Gelsema, B.W. Powell, G. Gallus, E. Vastola | 399 |
| Approaches to computer analysis of polio infection in HeLa cells,<br>H.M. Aus, K. Koschel, V. ter Meulen, P.H. Bartels                     | 407 |
| Identification of digitized particle trajectories,<br>H. Grote, M. Hansroul, J.C. Lassalle, P. Zanella                                     | 413 |

## COMPUTER-AIDED DESIGN

Chairmen: F.H. Sumner (Plenary Session)

I. de Lotto (Parallel Session)

Sparse matrix techniques in computer-aided design, (invited paper)  
I. de Lotto, G. Pierini, P. Tiberio 423

Perspective geometry and computer graphics: Techniques and applications in  
computer-aided design,  
J.W. Demic 435

Interactive computer aided design of control systems,  
K.C. Daly, G.C. Goodwin 443

Computer-aided design of the layout of integrated circuits (CADLIC),  
H. Klamet 451

## COMPUTER GRAPHICS

Chairman: J. Nievergelt (Parallel Session)

A. language for 3D graphics applications,  
M.E. Engeli 459

Optimizing curve segmentation in computer graphics,  
K. Reumann, A.P.M. Witkam 467

Finger input to a small graphic system,  
G. Vuilleumier, M. Sarret 473

## COMPUTER-AIDED INSTRUCTION, COMPUTER EDUCATION

Chairman: H.P. Frei (Parallel Session)

Application of mathematical models of learning in the decision structure of adaptive  
computer-aided instructional systems,  
J.H. Laubsch, A. Chiang 481

Generative CAI in high school algebra,  
T.J. Gilkey, E.B. Koffman 489

The automation of introductory computer science courses,  
J. Nievergelt, E.M. Reingold, T.R. Wilcox 495

## INFORMATION STORAGE AND RETRIEVAL SYSTEMS

Chairmen: B. Levrat (Plenary Session)

E.J. Neuhold (Parallel Session)

Real time systems in administrative data processing, (invited paper)  
C. Toulet 503

Automatic file compression,  
J.P. McCarthy 511

A system for the definition of the syntax and semantics of data description languages,  
G.L. Wolfendale 517

Self-contained facilities to process sub-structures of more complex network structures,  
T.W. Olle 527

## DATA BASES

Chairman: J.J. Duby (Parallel Session)

- Retrieval in a set-theoretically structured data base: Concepts and practical considerations,  
K. -D. Krägeloh, P.C. Lockemann 533
- Specifying data base systems,  
J.J. Florentin 541
- The prospects for large capacity set support systems imbedded within generalized data management systems,  
W.T. Hardgrave 549
- An experimental query system: SYNTEX,  
A. Artaud, J.M. Nicolas 557

## MEDICAL APPLICATIONS

Chairman: L. Dadda (Parallel Session)

- Reliability of the ECG-interpretation by seven different computer-programs compared to that of three cardiologists,  
J. Meyer, K. -W. Heinrich, W. Merx, S. Effert 565
- A method of sequential selection for information capture in a real-time information system,  
K.F. Bowden, G.I.L. Grafton, I.R. MacCallum 575
- Structure and functions of the patient data bank in the medical system Hannover,  
K. Sauter 585

## NON-NUMERICAL APPLICATIONS

Chairman: S. Crespi-Reghezzi (Parallel Session)

- Heuristic programming techniques applied to chemical mass spectrometry,  
A. Delfino, B. Levrat 591
- Theme searches in French texts,  
P.A. Fortier, J.C. McConnell 599
- Synthesis in dynamic models,  
J.A. Richter 605

## CLOSING SESSION

Chairman: B. Levrat

- Past, present, and future in the computer world, (invited paper)  
M.V. Wilkes 615

## LIST OF PARTICIPANTS

621
