Preface xix

Part I. **FINITE ELEMENTS—FUNDAMENTALS**

Variational Procedures and Convergence of Finite–Element Methods 1

G. R. Cowper

References 11

Isoparametric and Allied Numerically Integrated Elements—A Review

O. C. Zienkiewicz

1. Introduction 13
2. Basic Principles of Shape Function (Interpolation) Mapping 14
3. Uniqueness of Mapping 16
4. Iso-, Sub-, and Superparametric Elements 18
5. Evaluation of Element Properties in Curvilinear Coordinates 19
6. Required Accuracy of Numerical Integration 20
7. Some Useful Elements for Two- and Three-Dimensional Analysis 22
8. Degeneration of Quadrilateral or Brick Elements 26
9. Computation Efficiency of Numerical Integration 28
10. Practical Examples and Stress Computation 29
11. Shells and Plates as Limiting Cases of Three-Dimensional Analysis 31
12. Applications to Nonlinear Analysis 34
13. Concluding Remarks—Other Uses of Mapping 37

References 39

Incompatible Displacement Models

E. L. Wilson, R. L. Taylor, W. P. Doherty, and J. Ghaboussi

1. Introduction 43
2. Source of Errors 44

3. Addition of Incompatible Modes for Two-Dimensional Isoparametric Elements 45
4. Three-Dimensional Elements 51
5. Thick Shell Element 52
6. Thick Shell Examples 55
References 57

Hybrid Models

Theodore H. H. Pian

1. Introduction 59
2. Formulation of Hybrid Stress Model 60
3. Features of Hybrid Stress Model 63
4. Hybrid Displacement Models 74
5. Conclusion 76
References 76

Computer Implementation of the Finite–Element Procedure

Ernst Schrem

1. Introduction 79
2. Prerequisites 80
3. Solution Methods for the Load-Deflection Equations 83
4. Incorporation of Different Finite-Element Types 104
5. Modular Design 106
6. Problem Description and Representation of the Results 112
References 117

Part II. CRITICAL REVIEW OF GENERAL-PURPOSE STRUCTURAL MECHANICS PROGRAMS

Review of the ASKA Program

P. Meijers

1. Introduction 123
2. General Information 124
3. Element Library 125
4. Preparation of an ASKA Job 131
5. Special Features in ASKA 134
6. Dynamic Analysis 137
7. Problems Solved with ASKA 138
8. Concluding Remarks 147
References 148

A Critical View of NASTRAN

James L. Tocher and Ervin D. Herness

1. Introduction 151
2. History of NASTRAN 151
3. Boeing Evaluation Project 152
4. Analytic Capability 153
5. Element Technology 158
6. Numerical Methods 161
7. Ease of Use 164
8. Problem Size 165
9. Performance 166
10. Design Criteria 167
11. Maintainability 168
12. Conclusion 168

Appendix A. Future NASTRAN Developments 169
Appendix B. Examples of Analysis 170
References 173

The DAISY Code

D. N. Yates, W. W. Sable, and T. J. Vinson

1. Introduction 176
2. Some Features of DAISY 178
3. Lockheed's Development of DAISY 182
4. Some Examples of Problems Solved with DAISY 197
5. Future Plans 209

An Evaluation of the STARDYNE System

John Dainora

1. Introduction 211
2. STARDYNE 211
3. Examples of Problems Solved 216
4. Performance 224
5. Conclusions 226

Analysis and Design Capabilities of STRUDL Program

S. L. Chu

1. Introduction 229
2. Definition of the Problem 230
3. Analysis Facilities 231
4. Design Facilities 235
5. Save/Restore and Graphic/Output 237

6. Maintenance, Improvements, and Implementation 238
7. Machine Configuration 239
8. Computer Cost 239
9. Conclusion 244
References 245

Elastic–Plastic and Creep Analysis via the MARC Finite-Element Computer Program

D. J. Ayres

1. Introduction 247
2. Example 1—Plasticity Analysis 248
3. Example 2—Primary Creep Analysis 254
4. Other Examples 257
5. The Merits of MARC 263
6. Conclusions 263
References 263

Part III. FINITE DIFFERENCE/FINITE ELEMENTS—A MERGING OF FORCES

A Survey of Finite-Difference Methods for Partial Differential Equations

J. P. Wright and M. L. Baron

1. Introduction 265
2. General Discussion 267
3. Hyperbolic Systems 268
4. Parabolic Systems 271
5. Elliptic Systems 272
6. Tensor Product—Fast Fourier Transform Methods 275
7. Implicit versus Explicit Methods—Flexibility Concept 277
8. The Method of Fractional Steps 279
9. Stability and the Energy Method 283
References 286

Finite-Difference Energy Models versus Finite-Element Models: Two Variational Approaches in One Computer Program

David Bushnell

Nomenclature 292
1. Introduction 294
2. Analysis 295
3. Numerical Results 310

4. Comments on Application to Two-Dimensional Problems 325
5. Conclusions 331
Appendix 332
References 335

Comparison of Finite-Element and Finite-Difference Methods

Samuel W. Key and Raymond D. Krieg

1. Introduction 337
2. A Problem in Wave Mechanics 338
3. Early Literature 347
References 350

Incremental Stiffness Method for Finite Element Analysis of the Nonlinear Dynamic Problem

John F. McNamara and Pedro V. Marcal

1. Introduction 353
2. Review of Literature 354
3. Theoretical Considerations 355
4. Solution Procedure 357
5. Note on Solution Convergence 357
6. Computer Program 359
7. Case Studies 359
8. Discussion and Conclusions 373
References 375

The Lumped-Parameter or Bar–Node Model Approach to Thin-Shell Analysis

W. C. Schnobrich and D. A. Pecknold

1. Introduction 377
2. Shallow Shell Equations 379
3. Lumped-Parameter Model 381
4. Boundary Conditions 386
5. Selection of Proper Model 390
6. Conclusions 398
Appendix A. Lumped-Parameter Element Stiffness Matrices 399
References 401

Part IV. LARGE INTERACTIVE DATA BASES

Design Philosophy of Large Interactive Systems

Steven J. Fenves

1. Introduction 404
2. Components of Data Base 405

3. Program Design 407
4. Data Structure Design 409
5. Control System Design 411
6. Who Will Do It 412
7. Conclusions 413
References 414

Integrated Design of Tanker Structures

Johannes Moe

1. Introduction 415
2. Presentation of the Structural Problem 416
3. Design Procedure 419
4. Synthesis 424
5. Software System 428
6. Concluding Remarks 430
Appendix I. Automated Design and Optimization Programs 430
Appendix II. Example of BOSS Session 433
References 436

The STORE Project (The Structures Oriented Exchange)

J. M. McCormick, M. L. Baron, and N. Perrone

1. Introduction 439
2. Basic Concepts of STORE 441
3. Description of the STORE System 443
4. Use of the STORE System 446
5. Costs 450
6. Distinguishing Characteristics of the STORE System 451
7. Illustrative Example—Typical STORE Program Documentation 452
8. Present Status, Conclusions, and Recommendations 457
Appendix A. List of Programs in Project STORE 457
References 458

Part V. NEW CAPABILITIES FOR COMPUTER-BASED ANALYSIS

Symbolic Computing

Andrew Ka-Ching Wong

1. Introduction 459
2. Organization of Data and Data Processors 460
3. The Role of Symbolic Computation in Mechanics 466
4. Discussion and Conclusion 475
References 476

A Review of the Capabilities and Limitations of Parallel and Pipeline Computers

William R. Graham

1. Introduction 479
2. The Parallel Computer 480
3. The Pipeline Processor 481
4. Parallel and Pipeline 483
5. Parallel and Pipeline Execution Times 484
6. Parallel versus Pipeline: Efficiency 488
7. Languages for the Parallel and Pipeline Computers 490
8. Application Programming 491
9. Performance on Large Problems 492
10. Conclusion 494

References 495

Equation-Solving Algorithms for the Finite-Element Method

Bruce M. Irons and David K. Y. Kan

1. Introduction 497
2. Types of Record Encountered 497
3. Principal Types of Organization 498
4. Gaussian Reduction 501
5. Error Diagnostics 502
6. The Conjugate Gradient Algorithm 503
7. The Alternating-Direction Approach 508
8. Multivector Iteration 509
9. Conclusions 510

Appendix I. The Prefront with Variable Numbers of Degrees of Freedom at Different Nodes 510

Appendix II. Avoidance of Zeros within the Front 511

References 511

FLING—A FORTRAN Language for Interactive Graphics

W. J. Batdorf and S. S. Kapur

1. Introduction 513
2. Basic Graphic Subroutines 516
3. Example Problems 523

Appendix A. IBM 360 Interface Package 538

Part VI. NUMERICAL METHODS FOR A CHANGING TECHNOLOGY

Trends and Directions in the Applications of Numerical Analysis

Richard H. Gallagher

1. Introduction 543
2. Alternative Variational Principles 544
3. Constraint Equation Procedures 547
4. Interdisciplinary Applications 549
5. Concluding Remarks 552
References 554

Vehicle Crashworthiness

S. P. Desjardins

1. Introduction 557
2. Crash Environment 558
3. Injury Causes and Patterns 564
4. Crash Survival 569
5. Conclusions 583
References 584

Computational Fracture Mechanics

J. R. Rice and D. M. Tracey

1. Introduction 585
2. Numerical Determination of Elastic Stress Intensity Factors (Two-Dimensional Problems) 587
3. Crack Tip Plasticity 592
4. Singular Finite-Element Formation and Results 599
5. Three-Dimensional Problems 614
6. Micromechanics and Development of Fracture Criteria 616
7. Conclusion 620
References 621

Biomechanics

George Bugliarello

1. Mechanics in Living Systems 625
2. The Tasks of Biomechanics 626
3. A Function-Oriented Taxonomy of the Mechanics of Living Systems 627
4. Characteristics of Biomechanics Problems 631
5. The Role of Numerical Solutions in Biomechanics 633
6. State of the Art Examples of Numerical Solutions in Biomechanics 634
7. Conclusions: Artimechanics, Physimechanics, and Biomechanics 640
References 641

The Computer in Ship Structure Design

H. A. Kamel, D. Liu, and E. I. White

1. Introduction 643
2. Current and Future Developments in Computer Hardware 644
3. Current and Future Developments in Structural Analysis Software 645
4. Relationship between the Computer and the Engineer 645
5. Future Trends in Ship Structure Analysis 646
6. Problems and Useful Techniques in Interactive Analysis 647
7. The Local Analysis Procedure 648
8. The Reduced Substructure Technique (RESS) 649
9. Automatic Data Generation and Interpretation of Results 652
10. Data Banks 656
11. Multistep Solutions 657
12. Dynamic Modeling Using Compatible Finite Elements of Different Order 658
13. The Problem of Storage in a Small Computer 660
14. Method of Additional Constraints (MAC) 661
15. Variations on the Gauss–Seidel Iterative Technique 664
16. Conclusion 667
Appendix A. Nomenclature 667
References 668
