PREFACE xv

ACKNOWLEDGMENTS xvii

PART I/**Time Series and Stochastic Processes**

Two-Dimensional Random Fields

P. Bickel and M. Rosenblatt

Preliminaries 3
Details of the Proof of Theorem 1 6
References 15

Concepts of Consistency in Spectral Estimation for Multivariate Time Series

F. Eicker

1. Introductory Remarks 17
2. Should One Estimate the Spectral Distribution Function or Its Derivative? 18
3. Estimation of the Spectral Distribution Function F for a Multivariate Stationary Random Sequence 25

Appendix 28
References 29

Non-Anticipative Canonical Representations of Equivalent Gaussian Processes

G. Kallianpur

1. Introduction 31
2. The General Form of the Non-Anticipative Representation 31
3. A Derivation Using Martingale Theory 36
4. Concluding Remarks 43

References 43

Abstract Martingales and Ergodic Theory
M. M. Rao

Introduction 45
1. The Problem 46
2. Martingale Formulation 47
3. An Operator Theoretic Approach 50
4. A Maximal Inequality 57
5. Final Remarks 59
References 60

On the Modelling and Estimation of Communication Channels
W. L. Root

1. Introduction and Preliminary Discussion 61
2. Classes of Channels and Representations 64
3. Estimation of Parameters in a Linear Model 68
4. Channel Identification 73
5. Remarks 77
References 78

Innovation and Nonanticipative Processes
Yu. A. Rozanov

1. Innovation Processes and Regularity 79
2. Canonical Representations and Fully Submitted Processes 85
References 92

PART II/**Distribution Theory and Inference**

Methods for Assessing Multivariate Normality
D. F. Andrews, R. Gnanadesikan, and J. L. Warner

1. Introduction 95
2. Univariate Techniques for Evaluating Marginal Normality 97
3. Multivariate Techniques for Evaluating Joint Normality 98
4. Tests Based on Unidimensional Views of Multivariate Data 101
5. Examples 103
6. Concluding Remarks 115
References 115

Asymptotic Expansions for the Distributions of Characteristic Roots When the Parameter Matrix Has Several Multiple Roots
A. K. Chattopadhyay and K. C. S. Pillai

1. Introduction 117
2. The Maximization Procedures 118
3. Asymptotic Expansion for the Distribution of the Latent Roots of the Estimated Covariance Matrix—Several Multiple Population Roots 120
4. Asymptotic Expansion for the Distribution of the Latent Roots of $\mathbf{S}_1 \mathbf{S}_2^{-1}$—Several Multiple Population Roots 123

5. Asymptotic Expansion for Manova—Several Multiple Population Roots 124
6. Asymptotic Expansion for Canonical Correlation—Several Multiple Population Roots 125
7. Complex Analogues of Previous Results 126
8. Remarks 127
References 127

Aspects of the Multinomial Logit Model
A. P. Dempster

1. The General Logit Model 129
2. Properties of the Likelihood 131
3. Comment 140
Appendix: The Beaton Sweep 141
References 142

Inference and Redundant Parameters
D. A. S. Fraser

1. Introduction 143
2. The Probability Space Model 145
3. Measure Factorizations 147
4. If the Inner Parameter Become Known 149
5. A Redundant Parameter 151
6. The Multivariate Model 152
7. The Bayesian Right Invariant 155
References 156

The Variance Information Manifold and the Functions on It
A. T. James

1. The Variance Information Manifold and Its Boundary 157
2. The Bivariate Case 158
3. The Multinormal Distribution with Singular Information Matrix 159
4. Derivation via the Distribution of Linear Functions 162
5. Application to the Analysis of Experimental Designs 162
6. Representations as the Marginal Distribution of a Nonsingular Distribution 163
7. Decomposition of a Multinormal Distribution 163
8. Invariant Metric 165
9. Geodesic Distance between Two Matrices 166
10. Zonal Polynomials 167
References 169

Stopping Time in Sequential Samples from Multivariate Exponential Families
R. A. Wijsman

1. Introduction 171
2. The Main Theorem 173
3. Application to Examples 1.1 and 1.2 178
References 179

PART III/Characteristic Functions and Characterizations

An Isomorphism Method for the Study of I_0^n
Roger Cuppens

1. Introduction 183
2. Definitions and Notations 185
3. Isomorphism Method 186
4. Applications in the General Case 187
5. Applications to a Finite Independent Set 189
6. Applications to An Enumerable Independent Set 191
7. Finite Products of Poisson Laws 193
8. α-Decompositions 195

References 196

A Characterization of the Multivariate Geometric Distribution
Eugene Lukacs

1. Introduction 199
2. A Regression Property 199
3. The Characterization Theorem 200
4. Derivation of the Differential Equations 201
5. Completion of the Proof of Sufficiency 203
6. Proof of the Necessity 207

References 208

On Infinitely Decomposable Probability Distributions, and Helical Varieties in Hilbert Space
P. Masani

1. Introduction 209
2. The Canonical Association of Helical Varieties with Infinitely Decomposable Distributions 210
3. A Hilbert Space Proof of the Lévy–Khinchine Theorem for $\mathbb{R}^q$ 214
4. Operator-Measure Theoretic Treatment 216
5. On Probability and Hilbert Spaces 220
6. Bibliographical and Concluding Remarks 221

References 222

Limit Laws for Sequences of Normed Sums Satisfying Some Stability Conditions 225
K. Urbanik

References 237

PART IV/Design and Analysis of Experiments

The Analysis of Time Series Collected in an Experimental Design
David R. Brillinger

1. Introduction 241
2. The Finite Fourier Transform 242
3. The Fixed Effects Model 245
4. The Random Effects Model 248
5. The Point Process Case 253
   Appendix 255
   References 256

Max-Min Designs in the Analysis of Variance
R. H. Farrell

1. Introduction and Max-Min Designs 257
2. A Matrix Inequality and Regular Designs 260
   References 261

Analysis of Covariance Structures
K. G. Jöreskog

1. Introduction 263
2. General Results 264
3. Applications 271
   References 284

Optimum Designs for Fitting Biased Multiresponse Surfaces
J. Kiefer

1. Introduction 287
2. Formulation of Box and Draper 289
3. Minimizing $V + B$ 292
4. An Illustrative Example 294
5. Other Comments 296
   References 297

Asymptotic Properties of Some Sequential Nonparametric Estimators in Some Multivariate Linear Models
Pranab Kumar Sen and Malay Ghosh

1. Introduction 299
2. The Problems 300
3. Preliminary Notions and Basic Assumptions 300
4. Asymptotic Properties of Robust Sequential Point Estimators of (α,β) 303
5. Bounded Length (Sequential) Confidence Bands for θ 311
   References 315

PART V/Classification, Modelling, and Reliability

Availability Theory for Multicomponent Systems
Richard E. Barlow and Frank Proschan

Introduction and Summary 319
1. Preliminaries 320
2. Average System Up Time: Almost Sure Results 322
3. Asymptotic Distributions 327
4. Cost of Repair 333
References 334

Some Measures for Discriminating between Normal Multivariate Distributions with Unequal Covariance Matrices
Herman Chernoff

1. Summary and Introduction 337
2. The Measure S 338
3. The Measure T 339
4. The Kullback–Leibler Information Numbers 343
References 344

Correlation and Affinity in Gaussian Cases
Kameo Matusita

1. Introduction 345
2. Correlation Coefficient and ρ_{I}, ρ_{II} 346
3. Canonical Correlation and ρ_{I} or ρ_{II} 347
References 349

Identification of the Structure of Multivariable Stochastic Systems
M. B. Priestley, T. Subba Rao, and H. Tong

1. Introduction 351
2. Two Results in Principal Components Analysis 353
3. Multivariable Linear Systems 356
4. Identification of the System Structure 358
5. Reduction of the Dimension of the Output Vector 359
6. Reduction of the Dimension of the Input Vector 361
7. Practical Problems 363
8. Tests of Significance of Eigenvalues 363
9. Testing the Equality of $\lambda_{k+1}(\omega) = \lambda_{k+2}(\omega) = \ldots \lambda_p(\omega) = \lambda(\omega)$ 366
10. Asymptotic Theory for the Distribution of Eigenvalues 367
References 368

An Information Function Approach to Dimensionality Analysis and Curved Manifold Clustering
J. N. Srivastava

1. Introduction 369
2. Entropy in the Discrete and Continuous Cases 371
3. Uncertainty and Dimesionality 374
4. Some Auxiliary Techniques 377
5. Monte Carlo Studies 379
References 382

Nonlinear Iterative Partial Least Squares (NIPALS) Modelling: Some Current Developments
Herman Wold

1. Introduction and Summary 383
2. What is NIPALS Modelling? 384
3. Low Information versus High Information Modelling 387
4. Causal Flow Models in Econometrics and the Behavioural Sciences 390
5. Case Studies in NIPALS Modelling 399
References 405

TITLES OF CONTRIBUTED PAPERS 409
