

CONTENTS

Chapter 1 Set Theory and Boolean Algebra

1.1	Basic definitions of set theory	1
1.2	Relations between sets	2
1.3	Set operations—Venn diagrams	3

Chapter 2 Combinatorial Analysis

2.1	Introduction	12
2.2	First fundamental principle	12
2.3	Permutations	19
2.4	Combinations	22
*2.5	Further considerations	36

Chapter 3 Discrete Probability Theory

3.1	Introduction	41
3.2	Laplace's definition of mathematical probability	42
3.3	An axiomatic approach to discrete probability theory	51
3.4	Conditional probability, Bayes' formula	56
3.5	Independent events	63
3.6	Random variables · joint distributions · statistically independent events · distribution functions	72
3.7	Mean, or expectation, of a random variable	79
3.8	Higher moments · variance · correlation	90
*3.9	Generating functions	100
*3.10	Recurrent events · random walk problem	112

Chapter 4 Continuous Probability Theory

4.1	Introduction	119
4.2	The cumulative distribution function: CDF	127
4.3	Moments · mean · variance	138
4.4	Joint density functions · statistically independent random variables	147
4.5	Conditional probability density functions	161
4.6	Correlation · covariance · regression	167
4.7	Coordinate transformations	174
4.8	The chi-square (χ^2), student, and F distributions	179

4.9	The n -dimensional normal pdf, its covariance matrix	186
4.10	The central limit theorem	191
*4.11	Geometrical probabilities	195

Chapter 5 Properties of statistical samples

5.1	Introduction	201
5.2	Sample mean	202
5.3	Expectation of sample mean	203
5.4	Variance of sample mean	205
5.5	Chebyshev's inequality	208
*5.6	Special applications of the Chebyshev-Bienayme inequality	212
*5.7	Laws of large numbers	215
5.8	Sample variance	218
5.9	Variance of sample variance	220
*5.10	Distribution of sample mean and sample variance for samples from Gaussian populations	224

Chapter 6 Parametric Point Estimation

6.1	Introduction	230
6.2	Maximum a posteriori and maximum likelihood estimators for discrete distributions	230
6.3	Maximum a posteriori and maximum likelihood estimation for continuous distributions	234
6.4	Bayes estimation	246
6.5	Simple regression	249
*6.6	Multi-dimensional linear regression	258
*6.7	Variance of regression parameters	265

Chapter 7 Parametric Interval Estimation

7.1	Introduction	270
7.2	Probability intervals	271
7.3	Confidence intervals for the mean of a distribution with known variance	274
7.4	Confidence intervals for the variance of a Gaussian distribution with known mean	278
7.5	Confidence intervals for the variance of a Gaussian distribution with unknown mean	281
7.6	Confidence intervals for the mean of a Gaussian distribution with both mean and variance unknown	283
7.7	Confidence intervals for the ratio of variance of two samples from a Gaussian population	287
7.8	Summary of confidence interval definitions for normal distributions	292
*7.9	Joint probability regions for multivariate distributions	292
*7.10	Confidence regions for regression parameters	297

Chapter 8 Order Statistics and Nonparametric Methods

8.1	Introduction and definitions	301
8.2	Probability distributions of order statistics	302
8.3	Population quantiles and order statistics	309
*8.4	Asymptotic distributions of order statistics in large samples	313
8.5	Joint distributions of pairs of order statistics	317
8.6	Tolerance intervals	323
8.7	Confidence intervals for quantiles	326

Chapter 9 Hypothesis Testing

9.1	Introduction and general definitions	329
9.2	Composite alternative hypotheses	333
9.3	The one-sample t test	337
*9.4	The two-sample t test	340
9.5	The chi-square test	342
9.6	Run tests for randomness	347
9.7	The sign test for the equality of medians	351
*9.8	The Wilcoxon two-sample rank test	354

Appendix A Mathematical Preliminaries

A.1	Sequences · differences	359
A.2	Linear, constant-coefficient, homogeneous difference equations	366
A.3	Forcing functions · inhomogeneous difference equations	370
A.4	Elementary examples · solutions of difference equations · the gamma function	317
A.5	The summation convention	378
A.6	Determinants	386
A.7	Linear homogeneous equations	397
A.8	Matrices	403
A.9	Quadratic forms · orthogonal matrices	417
A.10	Coordinate transformations · Jacobians	425
A.11	The Dirac delta function · elementary differential equations	431
A.12	Taylor series · extrema · Lagrange multipliers	440

Appendix B Tables

Answers to Selected Problems	456
