

TABLE OF CONTENTS

CHAPTER I

FUNDAMENTAL PRINCIPLES

ART.	PAGE
1- 1. Introduction.....	1
1- 2. Assumptions in the Theory of Flexure.....	1
1- 3. Typical Problems in Flexure.....	2
1- 4. Usefulness of the Transformed Section Method.....	7
1- 5. Statement of the Transformed Section Method.....	7
1- 6. Application of the Transformed Section Method.....	8
1- 7. Practice Problems in Flexure (with Answers).....	9
1- 8. Practice Problems in Flexure (without Answers).....	15

CHAPTER II

WEB STRESSES IN CONCRETE BEAMS

2- 1. Nature of Web Stresses.....	19
2- 2. Diagonal Tension.....	19
2- 3. Computation of Shear.....	20
2- 4. Computation of Bond.....	23
2- 5. Stresses in Stirrups.....	24
2- 6. Miscellaneous Problems in Web Reinforcement.....	28

CHAPTER III

BEAM DESIGN PRACTICE

3- 1. Introduction.....	31
3- 2. Rectangular Beam Flexure Formulae.....	31
3- 3. Review of Rectangular Beams.....	34
3- 4. Design of Rectangular Beams.....	34
3- 5. Supply of Reinforcement to Known Cross Section.....	35
3- 6. Design and Review of One-Way Slabs.....	35
3- 7. Design of Web Reinforcement.....	36
3- 8. Tee Beams—Flexure Formulae.....	41
3- 9. Review of Tee Beams.....	43
3-10. Design of Tee Beams.....	44
3-11. Web Reinforcement for Tee Beams.....	45
3-12. Double Reinforced Beams—Flexure Formulae.....	46
3-13. Review of Double Reinforced Beams.....	47
3-14. Design of Double Reinforced Beams.....	48
3-15. Web Reinforcement in Double Reinforced Beams.....	49

CHAPTER IV

COLUMNS

ART.	PAGE
4- 1. Introduction.....	50
4- 2. Classification of Reinforced Columns Based upon Slenderness Ratio.....	50
4- 3. Theory of Reinforced Concrete Column Design (1936 A.C.I. Report).....	51
4- 4. Theory of Reinforced Concrete Column Design (Elastic Theory).....	53
4- 5. General Requirements of Reinforced Column Design.....	54
4- 6. Illustrative Problems.....	56
4- 7. Comparison of Designs.....	59
4- 8. Practice Problems (1936 Report).....	60
4- 9. Practice Problems (Elastic Theory).....	61

CHAPTER V

COMBINED BENDING AND DIRECT STRESS

5- 1. Introduction.....	62
5- 2. Members with Compression over Entire Section.....	62
5- 3. Members with Tension over a Part of Section.....	63
5- 4. Circular Columns under Bending and Direct Stress.....	64
5- 5. Practice Problems.....	66

CHAPTER VI

CONCRETE BUILDING DESIGN

6- 1. Floors.....	68
6- 2. Loads.....	68
6- 3. One-Way Beam—Slab Floor.....	68
6- 4. Two-Way Beam—Slab Floor.....	73
6- 5. The Relative Rigidity Method—Two-Way Slabs.....	74
6- 6. The Westergaard Method—Two-Way Slabs.....	76
6- 7. The A.C.I. Method—Two-Way Slabs (1936 Report).....	78
6- 8. Supporting Beams for Two-Way Slabs.....	81
6- 9. Reliability of Methods of Analysis of Two-Way Slabs.....	82
6-10. Tile Void Floors.....	83
6-11. Design of Tile Void Floors.....	85
6-12. Special Constructions for Void Floors.....	86
6-13. Flat Slab Floors.....	86
6-14. Definitions for Flat Slab Construction.....	87
6-15. Design Procedure for Flat Slab Floors.....	87
6-16. Reinforced Concrete Column Footings.....	89
6-17. Single Column Footings.....	91
6-18. Design of Single Column Footings.....	92
6-19. Combined Column Footings.....	96
6-20. Design of Combined Column Footings.....	97
6-21. Cantilever Column Footings.....	99

CHAPTER VII

MOMENTS IN BEAMS AND FRAMES

A. CONTINUOUS BEAMS

ART.	PAGE
7- 1. Introduction.....	101
7- 2. The Theorem of Three Moments.....	101
7- 3. Computation of Reactions.....	102
7- 4. Moment Distribution Method Applied to Beams.....	103
7- 5. Method of Conjugate Points.....	106
7- 6. The Slope Deflection Method Applied to Beams.....	109

B. FRAMES

7- 7. The Elastic Curved Beam Theory.....	110
7- 8. Application of the Elastic Curved Beam Theory.....	113
7- 9. The Moment-Area Method.....	119
7-10. The Moment Distribution Method Applied to Frames.....	121
7-11. The Slope Deflection Method.....	136
7-12. Application of Slope Deflection Method.....	143

CHAPTER VIII

FLOORS CARRYING CONCENTRATED LOADS

8- 1. The Problem.....	147
8- 2. Distribution of Wheel Loads on Concrete Slabs.....	147
8- 3. Distribution of Wheel Loads on Supporting Beams or Stringers.....	150
8- 4. Design Procedure.....	151
8- 5. Problems.....	152

CHAPTER IX

COMPOSITE MEMBERS OF CONCRETE AND
STRUCTURAL STEEL

9- 1. Introduction.....	154
9- 2. Composite T-Beams.....	154
9- 3. Composite Columns.....	162
9- 4. Problems.....	162

CHAPTER X

DESIGN OF ARCHES AND RIGID FRAMES

10- 1. Theory.....	163
10- 2. Arches.....	163
10- 3. Rigid Frames.....	170
10- 4. Making $\frac{s}{I}$ Constant.....	172
10- 5. The Multi-Story Building Frame.....	173
10- 6. Moments of Inertia of Sections.....	178
10- 7. Design Problems.....	179

CHAPTER XI

DESIGN OF MASONRY DAMS

ART.	PAGE
11- 1. Classification.....	194
11- 2. Forces Acting on Dams.....	194
11- 3. Foundation Pressure.....	195
11- 4. Internal Stresses.....	196
11- 5. Design of Low Dams.....	196
11- 6. Factors of Safety.....	198
11- 7. Design of High Dams.....	198
11- 8. Problems on Dams.....	203

CHAPTER XII

DESIGN OF RETAINING WALLS

12- 1. Classification.....	205
12- 2. Economy of Different Types.....	205
12- 3. Forces to be Considered.....	205
12- 4. The Sliding Wedge Theory.....	206
12- 5. The Rankine Theory.....	208
12- 6. Loaded Fills.....	210
12- 7. Foundation Pressures.....	212
12- 8. Factors of Safety.....	212
12- 9. Problems on Retaining Walls.....	212

APPENDIX A

SPECIFICATIONS

A.C.I. Building Regulations for Reinforced Concrete (1936).....	219-256
---	---------

APPENDIX B

PRACTICAL CONSIDERATIONS

B- 1. Design Tables and Diagrams.....	257, 262-284
B- 2. Placing and Holding Reinforcement.....	258-261
B- 3. Preparation of Drawings.....	285
B- 4. Typical Drawings.....	285 to end of book
INDEX.....	287
