

Contents

Chapter 1 Inequalities and Completeness

1.1	Introduction	1
1.2	Products which are equal to zero	2
1.3	Order	3
1.4	Absolute values. Intervals on the number line	9

Chapter 2 Analytic Geometry

2.1	Introduction	16
2.2	Coordinate systems. The distance formula	16
2.3	The graph of a condition. Equations for circles	21
2.4	Equations of lines. Slopes, parallelism, and perpendicularity	26
2.5	Graphs of inequalities. And, or, and if . . . then	33
2.6	Parabolas	38
2.7	Tangents	43
2.8	A shorthand for sums	49
2.9	The induction principle and the well-ordering principle	51
2.10	Solution of the area problem for parabolas	57

Chapter 3 Functions, Derivatives, and Integrals

3.1	The idea of a function	63
3.2	The derivative of a function, intuitively considered	69
3.3	Continuity and limits	75
3.4	Theorems on limits	82
3.5	The process of differentiation	89
3.6	The process of differentiation: roots and powers of functions	97
3.7	The integral of a nonnegative function	102
3.8	The derivative of the integral	109
3.9	Uniformly accelerated motion	119
*3.10	Proof of the formula for the derivative of the integral	124

Chapter 4 Trigonometric and Exponential Functions

4.1	Directed angles. Trigonometric functions of angles and numbers	128
4.2	The law of cosines and the addition formulas	135
4.3	The derivatives of the trigonometric functions; the differences Δx and Δf ; the squeeze principle	139

4.4	The approximation of differences by differentials	148
4.5	Composition of functions	154
4.6	The chain rule	159
4.7	Invertible functions. The inverse trigonometric functions	165
4.8	Simpson's rule. The computation of π	176
4.9	Exponentials and logarithms	185
4.10	The functions \ln and \exp	191
4.11	Exponentials and logarithms. The existence of e	197

Chapter 5 The Variation of Continuous Functions

5.1	Intervals on which a function increases, or decreases	206
5.2	Local maxima and minima, direction of concavity, inflection points	211
5.3	The behavior of functions at infinity	216
5.4	The introduction of functions into geometric problems; the use of existence theorems as shortcuts	223
5.5	The use of functional equations as shortcuts	232
5.6	The completeness of \mathbf{R} and the existence of maxima	238
5.7	The mean-value theorem and the no-jump theorem	246
5.8	The derivative of one function with respect to another	250

Chapter 6 The Technique of Integration

6.1	Introduction	254
6.2	Independent variables and indefinite integrals	255
6.3	Integrals leading to the logarithm and the inverse secant. Algebraic devices	265
6.4	Integration by parts	273
6.5	Integration of powers of trigonometric functions	278
6.6	Integration by substitution	284
6.7	Algebraic substitutions	291
6.8	Algebraic devices: completing the square and partial fractions	297

Chapter 7 The Definite Integral

7.1	The problem of arc length	303
7.2	The definite integral, defined as a limit of sample sums	308
7.3	The calculation of volumes, by the method of disks	315
7.4	The general method of cross sections, and the method of shells	321
7.5	The area of a surface of revolution	327
7.6	Moments and centroids. The theorems of Pappus	335
7.7	Improper integrals	344
*7.8	The integrability of continuous functions	350

Chapter 8 The Conic Sections

8.1	Translation of axes	356
8.2	The ellipse	360
8.3	The hyperbola	366
8.4	The general equation of the second degree. Rotation of axes	372

Chapter 9 Paths and Vectors in a Plane

9.1	Motion of a particle in a plane	381
9.2	The parametric mean-value theorem; l'Hôpital's rule	385
9.3	Other forms of l'Hôpital's rule	393
9.4	Polar coordinates	397
9.5	Areas in polar coordinates	402
9.6	The length of a path	405
9.7	Vectors in a plane	409
9.8	Free vectors	415
9.9	Velocity, acceleration, and curvature	422
9.10	Concluding remarks on vector spaces and inner product spaces	430

Chapter 10 Infinite Series

10.1	Limits of sequences	431
10.2	Infinite series. Convergence. Comparison tests	437
10.3	Absolute convergence. Alternating series	445
10.4	Estimates of remainders	448
10.5	Termwise integration of series. Power series for \tan^{-1} and \ln	453
10.6	The ratio test for absolute convergence. Applications to power series	457
10.7	Power series for \exp , \sin , and \cos	463
10.8	The binomial series	468
10.9	Taylor series	473
10.10	Taylor's theorem. Estimates of remainders	477
10.11	The complex number system	479
10.12	Sequences and series of complex numbers. The complex exponential function	484
10.13	De Moivre's theorem	489
*10.14	The radius of convergence. Differentiation of complex power series	493
*10.15	Integration and differentiation of real power series	499

Appendix A	The Shorthand of Logic and Set Theory	509
------------	---	-----

Appendix B	Algebraic Operations with Limits of Functions	512
------------	---	-----

Appendix C	Algebraic Operations with Limits of Sequences	517
------------	---	-----

Appendix D	The Error in the Approximation $\Delta f \approx df$	519
------------	--	-----

Appendix E	The Continuity of Composite Functions	522
------------	---	-----

Appendix F	The Error in Simpson's Rule	524
------------	---------------------------------------	-----

Appendix G	The Idea of a Measurable Set	527
------------	--	-----

Appendix H	Proof of the Northeast Theorem	529
Appendix I	Proof of the Formula for Path Length	533
Appendix J	A Method for Constructing the Complex Numbers	535
	Selected Answers	539
	Index	559
