| <i>Preface</i> | iv |
| 1. Mechatronic Systems | 1 |
| 1. Introduction | 1 |
| 2. Mechatronic System Components | 2 |
| 2.1 Mechanical Elements | 2 |
| 2.2 Sensors | 2 |
| 2.3 Actuators | 3 |
| 2.4 Electrical and Electronic Components | 3 |
| 2.5 Control Hardware | 3 |
| 2.6 Information Systems | 3 |
| 2.7 Mechatronic Areas of Expertise | 3 |
| 3. Mechatronic Design Methodologies | 4 |
| 3.1 Multidisciplinary Systems | 5 |
| 3.2 Concurrent Engineering | 5 |
| 3.3 Mechatronic Design Process | 5 |
| 3.4 VDI 2206 Standard | 6 |
| 3.5 Alternative Design and Integration Process | 7 |
| 4. System Modeling and Simulation | 8 |
| 4.1 Model-based System Design | 9 |
| 4.2 Model-based Control Design | 9 |
| 4.3 Hardware-in-the-Loop Simulations | 10 |
| 5. Case Study – DDR Mobile Robot | 11 |
| 5.1 Control System Design Methodology | 11 |
| 5.2 Mobile Robot Modeling and Simulation | 12 |
| 5.3 Robot Control Algorithms | 13 |
| 5.4 Graphical 3D Model and Animation | 14 |
| 5.5 Real-Time HiL Simulation | 14 |
| 6. Conclusions | 15 |
| References | 16 |
| 2. Industrial Automation and Control | 17 |
| 1. Introduction | 17 |
| 2. Automation Technologies | 18 |
| 2.1 Automation Pyramid | 18 |
| 2.2 Automation Levels in Manufacturing Industries | 19 |

| | | |
|-----------|---|-----------|
| 2.3 | Automation Levels in Processes Industries | 19 |
| 2.4 | Operational Technologies | 20 |
| 2.5 | Information Technologies | 21 |
| 3. | Industrial Control Systems | 22 |
| 3.1 | Feedback Regulatory Control and Servo-Control | 23 |
| 3.2 | Discrete Event Systems and Sequential Logic Control | 24 |
| 4. | Control Systems Design | 24 |
| 4.1 | System Design | 25 |
| 4.2 | System Implementation | 26 |
| 5. | Control Software Development | 26 |
| 5.1 | Concurrent Engineering | 27 |
| 5.2 | Safety Considerations | 28 |
| 6. | Case Study | 29 |
| 7. | Conclusions | 31 |
| | References | 32 |
| 3. | Linear Systems Analysis and Modeling | 33 |
| 1. | Introduction | 33 |
| 2. | Signals and Systems | 34 |
| 2.1 | Signal Representation and Classification | 34 |
| 2.2 | Systems Classifications and Properties | 35 |
| 3. | Continuous Time Linear Systems | 38 |
| 3.1 | Ordinary Differential Equations | 38 |
| 4. | Laplace Transform | 39 |
| 4.1 | Complex Exponentials | 40 |
| 4.2 | Introduction to Laplace Transform | 41 |
| 4.3 | Transfer Functions | 42 |
| 4.4 | Impulse Response of First-Order Systems | 43 |
| 4.5 | Impulse Response of Second-Order Systems | 44 |
| 4.6 | Partial Fractions Expansion Method | 46 |
| 4.7 | Step Response of First-Order Systems | 47 |
| 4.8 | Step Response of Second-Order Systems | 49 |
| 5. | Frequency Response Analysis | 51 |
| 5.1 | Fourier Transform | 51 |
| 5.2 | Bode Plot of First-Order Systems | 52 |
| 5.3 | Bode Plot of Second-Order Systems | 53 |
| 6. | Modeling of Physical Systems | 54 |
| 6.1 | Modeling First-Order Systems | 54 |
| 6.2 | Modeling of Second-Order Systems | 55 |
| 6.3 | Modeling of a DC Motor | 57 |
| 7. | Conclusions | 58 |
| | References | 59 |

| | |
|--|------------|
| 4. Discretization of Linear Systems | 60 |
| 1. Introduction | 60 |
| 2. Discrete-Time Signals and Systems | 61 |
| 2.1 Impulse Response | 61 |
| 2.2 Difference Equations | 63 |
| 3. Introduction to Z-Transform | 64 |
| 3.1 Discrete Transfer Functions | 65 |
| 4. Euler Backward Differences | 68 |
| 4.1 BEM Digitalization in Time-Domain | 68 |
| 4.2 BEM Digitalization in Frequency Domain | 72 |
| 5. Bilinear Transform | 74 |
| 5.1 BLT Mapping | 74 |
| 5.2 BLT Conversion Procedure | 75 |
| 5.3 Hybrid Transformation | 76 |
| 5.4 Comparison of Discretization Methods | 78 |
| 6. Practical Digital Filtering | 80 |
| 6.1 Finite and Infinite Impulse Response Filters | 80 |
| 6.2 Basic Digital Filter Design | 81 |
| 7. Conclusions | 85 |
| References | 86 |
| 5. System Identification | 87 |
| 1. Introduction | 87 |
| 2. System Identification Problem | 88 |
| 3. Continuous-Time Identification | 88 |
| 3.1 Identification of First-Order Systems | 89 |
| 3.2 Comparison of First-Order Identification Methods | 92 |
| 3.3 Identification of Second-Order Underdamped Systems | 93 |
| 4. Discrete-Time Identification | 96 |
| 4.1 PRBS Experiment | 97 |
| 4.2 Model Approximation by Minimum Square Error Method | 100 |
| 4.3 Model Validation by Regression Analysis | 102 |
| 5. Conclusions | 104 |
| References | 105 |
| 6. State Space Modeling | 107 |
| 1. Introduction | 107 |
| 2. State Space Model Formulation | 107 |
| 2.1 Definitions | 108 |
| 2.2 State Space Equations | 108 |
| 2.3 State Space to Transfer Function | 113 |
| 3. State Space Equation Solution | 115 |
| 3.1 Solutions to the State Space Equation | 115 |
| 3.2 State Transition Matrix | 117 |

| | |
|---|------------|
| 4. Controllability and Observability | 125 |
| 4.1 Controllability | 126 |
| 4.2 Observability | 127 |
| 4.3 Similarity Transformation and Canonical Forms | 127 |
| 5. State Space Models in Discrete Time | 132 |
| 5.1 Discretization of a State Space System | 132 |
| 5.2 Discretization with Bilinear Transform | 134 |
| 6. Conclusions | 137 |
| References | 138 |
| 7. PID Control | 139 |
| 1. Introduction | 139 |
| 2. Fundamentals of Proportional and Integral Control | 140 |
| 2.1 Open Loop Control | 140 |
| 2.2 Closed Loop Control | 141 |
| 3. PI Controller for First-Order Systems | 142 |
| 3.1 Direct Synthesis Method | 142 |
| 3.2 First-Order Process | 143 |
| 3.3 First Order with Integrator | 147 |
| 4. Derivative Controller Effect | 148 |
| 4.1 Derivative Term on the Error | 148 |
| 4.2 Derivative Term on the Process Variable | 150 |
| 4.3 Filtering of the Process Variable | 151 |
| 5. PID Controller for Second-Order Systems | 152 |
| 6. PID Controller for Processes with Time Delay | 157 |
| 7. Implementation Considerations and Performance Evaluation | 160 |
| 7.1 Hardware and Software Platform | 161 |
| 7.2 Bumpless Transfer and Anti-Reset Windup | 162 |
| 7.3 Evaluating the Performance of Closed Loop Controllers | 162 |
| 8. Conclusions | 162 |
| References | 163 |
| 8. Model-Based Control | 165 |
| 1. Introduction | 165 |
| 2. Internal Model Control Principle | 166 |
| 3. IMC-Based PID Type Controllers | 167 |
| 3.1 First-Order Process | 167 |
| 3.2 Second-Order Process | 168 |
| 3.3 First-Order Process with Dead Time | 169 |
| 3.4 IMC for High-Order Processes | 170 |
| 4. Model Reference Adaptive Control | 174 |
| 4.1 Load Disturbances in DC Motors | 174 |
| 4.2 Adaptive Control of DC Motor | 175 |
| 4.3 Model Reference Control Schemes | 177 |
| 4.4 Combined MRC-IMC Motor Speed Control | 178 |

| | | |
|------------|---|------------|
| 5. | Introduction to State Space Control | 179 |
| 5.1 | Full State Feedback | 180 |
| 5.2 | Pole Placement in Discrete Time | 181 |
| 5.3 | State Space Observers | 182 |
| 5.4 | State Space Control Methods | 184 |
| 6. | Conclusions | 185 |
| | References | 185 |
| 9. | Multiple Loop Control Schemes | 187 |
| 1. | Introduction | 187 |
| 2. | Feedforward Control | 188 |
| 3. | Cascade Control | 192 |
| 4. | Ratio Control | 196 |
| 4.1 | Parallel Ratio Control | 197 |
| 4.2 | Series Ratio Control | 198 |
| 4.3 | Cross-Limit Ratio Control | 199 |
| 5. | Two Degree of Freedom PID | 202 |
| 5.1 | Feedforward 2DOF PID Configuration | 202 |
| 5.2 | Feedback 2DOF PID Configuration | 203 |
| 5.3 | Method for Tuning 2DOF PID | 203 |
| 6. | Case Study: Reheating Furnace | 204 |
| 6.1 | Reheat Process Description | 204 |
| 6.2 | Furnace Control Systems | 204 |
| 7. | Conclusions | 206 |
| | References | 207 |
| 10. | Digital Control Design | 208 |
| 1. | Introduction | 208 |
| 2. | General Design Method | 209 |
| 3. | Design 1: Dead-Beat Controller | 212 |
| 3.1 | Dead-Beat Controller Nominal Performance | 213 |
| 3.2 | Dead-Beat Controller Sensitivity and Saturation | 214 |
| 4. | Design 2: Kalman Controller | 217 |
| 4.1 | Kalman Controller Nominal Performance | 218 |
| 4.2 | Kalman Controller Sensitivity and Saturation | 218 |
| 5. | Design 3: Dahlin Controller | 220 |
| 5.1 | Dahlin Controller Nominal Performance | 222 |
| 5.2 | Dahlin Controller Sensitivity and Saturation | 222 |
| 6. | PID Controller in z-Domain | 224 |
| 6.1 | PI Controller | 225 |
| 6.2 | PD Controller | 225 |
| 6.3 | PID Controller | 226 |
| 7. | Conclusions | 227 |
| | References | 228 |

| | |
|---|------------|
| 11. PLCs and Sequential Logic Control | 230 |
| 1. Introduction | 230 |
| 2. Combinational and Sequential Logic | 231 |
| 2.1 Combinational Logic Control | 231 |
| 2.2 Sequential Logic Control | 232 |
| 2.3 Mixing and Heating Process Example | 233 |
| 3. Programmable Logic Controllers | 234 |
| 3.1 PLC Operation | 234 |
| 3.2 PLC Programming Languages | 236 |
| 4. Logic Design by Time Diagram | 240 |
| 4.1 Pick-and-Place System Description | 240 |
| 4.2 Pick-and-Place Control with Time Diagrams | 241 |
| 5. Logic Design by Sequenced Latching | 244 |
| 5.1 Sequential Latching Method | 244 |
| 5.2 Pick-And-Place Control with Sequenced Latching | 244 |
| 6. Discrete Event Systems Simulation | 246 |
| 6.1 Actuators and Sensors Simulation with Timers | 246 |
| 6.2 Actuators and Sensors Simulation with Integrators | 247 |
| 7. Conclusions | 248 |
| References | 249 |
| 12. Logic Control with State Machines | 250 |
| 1. Introduction | 250 |
| 2. Modeling Discrete Event Systems | 251 |
| 2.1 Finite States Machines Description | 251 |
| 2.2 Finite States Machines Representation | 252 |
| 3. State Machines for Logic Control | 253 |
| 3.1 Sequential Problem: Drilling Station | 254 |
| 3.2 Sequential Problem: Pick-and-Place Station | 256 |
| 4. Implementation of Finite State Machines | 259 |
| 4.1 Finite State Machine Using Binary Variables | 259 |
| 4.2 Finite State Machine Using Numeric Register | 262 |
| 4.3 Finite State Machine as a GRAFCET or SFC Program | 263 |
| 5. Concurrence with FSM | 265 |
| 6. Conclusions | 267 |
| References | 268 |
| 13. Multilevel Automation | 270 |
| 1. Introduction | 270 |
| 2. Supervisory Control | 271 |
| 2.1 Automation Levels | 271 |
| 2.2 SCADA Functions | 272 |
| 3. Automation of a Manufacturing Cell | 273 |
| 3.1 Automation of the Conveyor-Belt System | 275 |
| 3.2 Control of the Robot System | 276 |

| | | |
|-------------------------------------|--|------------|
| 3.3 | Automation of AS/RS | 278 |
| 3.4 | Control of the Elevator of the AS/RS | 280 |
| 3.5 | Manufacturing Cell Integration | 280 |
| 4. | Data Acquisition and Logging Functions | 284 |
| 5. | Conclusions | 286 |
| | References | 286 |
| 14. Hybrid Dynamical Control | | 288 |
| 1. | Introduction | 288 |
| 2. | Hybrid Dynamical Systems | 289 |
| 2.1 | Modeling Hybrid Systems Behavior | 290 |
| 2.2 | Hybrid Automata | 290 |
| 3. | Hybrid Dynamical Control | 291 |
| 3.1 | Finite State Model Predictive Control | 292 |
| 3.2 | Hybrid Control in Industrial Processes | 293 |
| 3.3 | Supervisory Control and Cyber Physical Systems | 293 |
| 4. | FSM and PID Control of a DC Motor | 294 |
| 4.1 | Finite State Machine Based Position Control | 294 |
| 4.2 | FMS-PID Dynamical Response | 295 |
| 5. | HDC of 4-Story Elevator | 298 |
| 5.1 | Elevators Sensors and Actuators | 298 |
| 5.2 | Description of Operation | 299 |
| 5.3 | Elevator Control with Hybrid Automata | 300 |
| 5.4 | Elevator Control Implementation | 301 |
| 6. | Conclusions | 302 |
| | References | 302 |
| 15. Cyber Physical Systems | | 304 |
| 1. | Introduction | 304 |
| 2. | Industry 4.0 and Smart Manufacturing | 305 |
| 2.1 | Industry 4.0 Fundamental Technologies | 305 |
| 2.2 | From Industry 3.0 to Industry 4.0 | 306 |
| 3. | Cyber Physical Systems and Digital Twins | 307 |
| 3.1 | Cyber Physical Production Systems | 308 |
| 3.2 | Digital Twins | 308 |
| 4. | Cyber Physical Systems Implementation | 309 |
| 4.1 | CPS for Advanced Automation and Control | 309 |
| 4.2 | Basic Approach to a CPS Design | 310 |
| 5. | Case Study: CPS of a CNC Router | 312 |
| 5.1 | Virtual Twin Development | 312 |
| 5.2 | Virtual Twin Coordination with the Physical Router | 316 |
| 5.3 | Implementing Supervisory Control Functions | 316 |
| 6. | Conclusions | 317 |
| | References | 317 |
| Index | | 319 |
