

CONTENTS

Chapter 1 Introduction

1-1	Basic concepts	1
1-2	Nature of decisions under uncertainty	3
1-3	Prior and posterior probabilities	8
1-4	Characteristics of probabilistic models	11
1-5	Expected values	14
1-6	General considerations for probabilistic decision problems	15
1-7	Potential applications and limitations	17

Chapter 2 Probability

2-1	Elementary examples	21
2-2	Sample spaces and events	24
2-3	Permutations and combinations	25
2-4	Basic notions of sets	28
2-5	Axiomatic development of probability	33
2-6	Conditional probability and independence	34
2-7	Total probability and Bayes rule	37
2-8	One-dimensional random variables	41
2-9	Probability distributions	44
2-10	Expectations	52
2-11	Uniform distributions	56
2-12	Binomial and Poisson distributions	58
2-13	Normal distribution	62
2-14	Other important distributions	65
2-15	Chebyshev's inequality	69

Chapter 3 Multivariate Distributions

3-1	Elementary examples	80
3-2	Two-dimensional random variables	82
3-3	Marginal distributions	86
3-4	Conditional distributions	88
3-5	Expectations of bivariate distributions	93
3-6	Bivariate normal distribution	96
3-7	Multivariate distributions	98

VI CONTENTS

3-8	Stochastic processes	101
3-9	Dependence relations	103
3-10	Markov chains	106

Chapter 4 Derivation of Distributions

4-1	Elementary examples	115
4-2	Derivation of distributions by equivalent events	116
4-3	Equivalent events for functions of two random variables	121
4-4	Direct derivations of probability density functions	128
4-5	Moment-generating functions	134
4-6	Sums of random variables	140
4-7	Central limit theorem	144
*4-8	Distributions of ordered random variables	147
*4-9	Derivation of distributions using functional relations	151
*4-10	Poisson distribution for random events	153
*4-11	Birth and death processes	157

Chapter 5 Decision Theory

5-1	Elementary examples	164
5-2	The basic dilemma	165
5-3	Decision trees	166
5-4	Expected-value criterion	170
5-5	Theory of contract bidding	174
5-6	Optimal flood protection levels	182
5-7	Insurance and solvency	185
5-8	Utility	187
5-9	Costs of uncertainty	192

Chapter 6 Sampling

6-1	Elementary examples	200
6-2	Random samples	202
6-3	Statistical estimators	204
6-4	Law of large numbers	209
6-5	Empirical distributions	212
6-6	Sampling distribution of the mean	221
6-7	Sampling distribution of the variance	225
6-8	Student's <i>t</i> -distribution	227
*6-9	<i>F</i> -distribution	229
6-10	Confidence intervals	231
6-11	Sampling designs	234

Chapter 7 Statistical Inference

7-1	Elementary examples	240
7-2	Prior and posterior probability calculations	241

7-3	Sufficient statistics	244
7-4	Conjugate prior distributions	246
7-5	Bayes risk	248
7-6	Statistical loss functions	253
7-7	Point estimation	255
7-8	Criteria for estimators	259
7-9	Maximum likelihood estimates	260
7-10	Hypothesis testing	262
7-11	Applications of hypothesis testing	266

Chapter 8 Regression Analysis

8-1	Elementary examples	273
8-2	Regression equations	276
8-3	Least squares estimates	281
8-4	Measure of precision	287
*8-5	Confidence limits for the estimates	292
8-6	Multiple linear regression	294
8-7	Correlation between random variables	298

Chapter 9 Reliability and Safety

9-1	Elementary examples	302
9-2	Quantitative measures related to reliability	306
9-3	Statistical estimates of reliability measures	312
9-4	Probability distributions for failure models	315
9-5	System reliability	318
9-6	Reliability of engineering structures	320
*9-7	Practical considerations in safety analysis	323
*9-8	Criteria for optimizing levels of safety	327

Chapter 10 Monte Carlo Simulation

10-1	Elementary examples	332
10-2	Monte Carlo procedures	335
10-3	Generation of synthetic observations	339
10-4	Types of simulation	345
10-5	Sample size	350
10-6	Variance reducing schemes	352
