Chapter 1 The Origins of Differential Equations

1.1	Introduction	1
1.2	What is a Differential Equation?	1
1.3	What is a Solution?	2
1.4	Where do Differential Equations Arise?	4
1.5	Maximum Altitude (1)	5
1.6	Maximum Altitude (2)	7
1.7	Growth of a Population (1)	8
1.8	The Inverse Problem	10
1.9	Growth of a Population (2)	11
1.10	Population Explosion	13
1.11	Geometric Problems	14
1.12	Curves of Pursuit	16
1.13	Electric Circuits	18
1.14	Analog Computers	19
1.15	Mathematical Economics: Maximization of Profit	20
1.16	Mathematical Economics: Steel Production and Bottleneck Processes	22
1.17	Drug Kinetics	23
1.18	One-Dimensional Neutron Transport Theory	24
1.19	One-Dimensional Neutron Transport Theory, an Alternative Approach	26
1.20	Discussion	27
1.21	Direct Use of Differential Equations	28
1.22	Particular Solutions	31
	Bibliography and Comments	33

Chapter 2 Linear Differential Equations and Their Solutions in Compact Forms

2.1	Introduction	35
2.2	A Simple Uniqueness Theorem	36
2.3	The Equation $y' + ay = g(x)$	37
2.4	The Equation $y' + a(x)y = g(x)$	40
2.5	Decoupling of Initial Condition and Forcing Term	43
2.6	Discontinuous Functions	43
2.7	The Equation $y'' + ay' + by = 0$	47
2.8	An Illustrative Example	49
2.9	The Euler-DeMoivre Formulas	50
2.10	Real and Complex Solutions	51
2.11	The Euler Formalism	52
2.12	Linearity and the Principle of Superposition	53
2.13	The Riccati Equation	56
2.14	Initial-Value Problems	57
2.15	An RC -Circuit	60
2.16	$E(t) = E_0 \cos \omega t$	62
2.17	$E(t) = E_0 \cos \omega t$ (Superposition)	64
2.18	An RL -Circuit	65
2.19	An LC -Circuit	66
2.20	An LC -Circuit with Alternating Voltage	67
2.21	Linear Homogeneous and Inhomogeneous Equations	68
2.22	Illustrative Examples	70
2.23	Exponential Forcing Term	71
2.24	Alternating Voltage, Continued	72
2.25	No Resistance	73
2.26	Resonance	74
2.27	Tuning	75
2.28	Uniqueness: A Reprise	76
2.29	Uniqueness: Use of an Integral Equation	77
2.30	General Solution of Inhomogeneous Equation	79
2.31	Two-Point Boundary Conditions	81
2.32	Critical Length	83
2.33	The Euler Equation	83
2.34	Linear Difference Equations	85
2.35	Discussion	88
	Miscellaneous Exercises	89
	Bibliography and Comments	91

Chapter 3 Power-Series Solutions

3.1	Introduction	93
3.2	Polynomials and Power Series	93

3.3	Convergence and Divergence	95
3.4	Maclaurin Series	96
3.5	Power-Series Solutions of Differential Equations	98
3.6	Existence and Uniqueness of Solution	99
3.7	Power-Series Solution of $u'' - xu = 0$	100
3.8	Alternative Procedure	102
3.9	Convergence (1)	103
3.10	Expansions about $x = a$	105
3.11	Nonlinear Equations	107
3.12	Numerical Aspects	108
3.13	The Swinging Pendulum (1)	110
3.14	The Swinging Pendulum (2)	112
3.15	Convergence (2)	113
3.16	Slightly More General Linear Differential Equations	115
3.17	Discussion	116
3.18	Modified Power-Series Solution	117
3.19	Still More General Linear Differential Equations	120
3.20	Perturbation Techniques	121
3.21	Analytic Expressions	122
3.22	The Nonlinear Spring	123
3.23	The Equation for v_1	124
3.24	Legitimacy	125
3.25	Discussion	126
3.26	When do Periodic Solutions Exist?	127
3.27	Singular Perturbations	128
3.28	The WKB-Approximation	129
3.29	Discussion	131
	Miscellaneous Exercises	132
	Bibliography and Comments	136

Chapter 4 The Numerical Solution of Differential Equations

4.1	Introduction	139
4.2	A Pursuit Process	140
4.3	A Discrete Pursuit Process	141
4.4	Difference Approximations	145
4.5	Explicit Solution of the Difference Equation	147
4.6	Discussion	149
4.7	Lack of Uniqueness	149
4.8	Lack of Continuity for Large t	150
4.9	A Useful Existence and Uniqueness Theorem	151
4.10	A Simple Sample Numerical Approach	151
4.11	Greater Accuracy	153
4.12	Validity of Difference Approximation	154
4.13	How do we Obtain Greater Accuracy?	155

4.14	Numerical Stability	157
4.15	Round-Off Error	160
4.16	Taking the Sting out of Arithmetic	162
4.17	Flow Charts and FORTRAN Programs	163
4.18	What Value of Δ to Use?	165
4.19	Evaluation of Functions	168
4.20	Using the Differential Equation for e^t	169
4.21	Identification of Systems	170
4.22	Direct Search	171
4.23	Sophisticated Search	173
	Miscellaneous Exercises	174
	Bibliography and Comments	175

Chapter 5 Linear Systems and N th-Order Differential Equations

5.1	Introduction	181
5.2	N th-Order Linear Differential Equations	183
5.3	The Vandermonde Determinant	184
5.4	An Illustrative Example	186
5.5	Existence and Uniqueness of Solution	187
5.6	The Laplace Transform	189
5.7	Partial Fractions	192
5.8	Discussion	194
5.9	Linear Systems	194
5.10	An Alternative Approach	196
5.11	Power-Series Solutions	196
5.12	Some Remarks Concerning Computational Techniques	197
5.13	Partial Differential Equations	197
	Miscellaneous Exercises	198
	Bibliography and Comments	202

Chapter 6 Existence and Uniqueness Theorems

6.1	Introduction	203
6.2	Uniqueness	203
6.3	The Equation $u' = g(u, t)$, $u(0) = c$	205
6.4	Higher-Order Equations	206
6.5	Systems	207
6.6	Existence	208
6.7	Boundedness	209
6.8	Convergence	210
6.9	The General Case	212
6.10	Two-Point Boundary-Value Problems	213

6.11	Quasilinearization	214
6.12	Discussion of the Convergence of Finite Difference Algorithms	215
	Bibliography and Comments	217
	Answers to Selected Exercises	219
	Author Index	226
	Subject Index	227
