

CONTENTS

Chapter 1. Graphs and Physical Models

1.1	Graphs as structural models	1
1.2	Typical problems	3
1.3	Related reading	4

Chapter 2. Definitions and Fundamental Principles

2.1	Directed and undirected graphs	9
2.2	Weighted graphs	12
2.3	Paths and circuits	13
2.4	Cut-sets, cuts, and trees	17
2.5	Matrices associated with graphs	23
2.6	Mathematical programming	26

Chapter 3. Maximum Flow in Deterministic Graphs

3.1	Flows in graphs	33
3.2	The max-flow min-cut theorem	39
3.3	Combinatoric proof of the max-flow min-cut theorem	41
*3.4	Graph theoretic proof of the max-flow min-cut theorem	43
*3.5	Linear programming proof of the max-flow min-cut theorem	47
3.6	Extensions of the max-flow min-cut theorem	55
3.7	The multicommodity flow problem	56
3.8	Maximum two-commodity flow	63
3.9	Common terminal multicommodity flow	71
3.10	Further remarks	74

Chapter 4. Maximum Flow in Probabilistic Graphs

4.1	Introduction	82
4.2	Elementary hypothesis testing	83
4.3	Pseudoparametric terminal capacity analysis	87
4.4	Maximum flow rate probability for arbitrarily distributed branch capacities	92
4.5	Parametric terminal capacity analysis with normally distributed branch flows	98
4.6	Approximations	104
*4.7	Parametric terminal capacity analysis with normally distributed maximum flow	113
4.8	Further remarks	125

Chapter 5. Multiterminal Analysis and Synthesis

5.1	Introduction	131
5.2	Properties of terminal capacity matrices	132
5.3	Analysis of pseudosymmetric graphs	141
5.4	Semigraphs and shifting	147
5.5	Undirected graphs	155
5.6	Maximally distinct requirement matrices	157
*5.7	Perturbations to obtain maximally distinct requirement matrices	161
*5.8	A general realization algorithm.	171
5.9	Vertex-weighted graphs	176
5.10	Further remarks	185

Chapter 6. Minimum Cost Problems

6.1	Introduction	192
6.2	Shortest paths, N th shortest paths, and generalizations	192
6.3	Shortest trees	206
6.4	Minimum cost flows	210
6.5	Distances on a graph	220
6.6	Minimum cost realizations of distance matrices of undirected graphs	223
6.7	Centers and medians of a graph	232
6.8	Optimum locations on graphs with probabilistic vertex weights	241
6.9	Minimum cost realization of terminal capacities	255
6.10	Pseudoparametric minimum cost improvement of probabilistic graphs	263
*6.11	Parametric minimum cost improvement of probabilistic graphs	270
6.12	Graphs with gains	277
6.13	Further remarks	289

Chapter 7. Connectivity and Vulnerability of Deterministic Graphs

7.1	Introduction	300
7.2	Vertex and mixed cut-sets	302
7.3	Determination of smallest vertex cut-sets	304
7.4	Multiple minimum cut-set calculations	309
7.5	Maximization of the smallest branch cut-set	314
7.6	Graphs with specified branch redundancies	324
7.7	Maximization of the smallest vertex cut-set	330
7.8	Bipartite graphs with maximum values of vertex cut-sets	336
7.9	Approximations to minimum cost invulnerable graphs	341
7.10	Maximization of the minimum n_1 degree	343
7.11	Further remarks	352

Chapter 8. Connectivity and Vulnerability of Probabilistic Graphs

8.1	Random models of networks	357
8.2	Random mapping functions	359
8.3	Outwardly homogeneous graphs	371
8.4	Generalizations	385
*8.5	Biased graphs.	393

*8.6	Percolation processes	400
8.7	Some problems related to the synthesis of invulnerable networks	409
8.8	Further remarks	430

Chapter 9. Time Delay in Networks

9.1	Introduction	439
9.2	Graphs with deterministic branch delays	440
9.3	Graphs with memory	449
9.4	Elementary queuing theory	453
9.5	Stochastic message flow and delay	458
9.6	Further remarks	468
	Index	471
