

Table of Contents

Introduction	1
Chapter I. Some Problems in Integral Geometry	6
1. Problem of Finding a Function from its Integrals over Ellipsoids of Revolution	6
2. Generalization to the Case of Analytic Curves	10
3. Existence Theorem for the Case of Ellipses	14
4. Determination of a Function from its Integrals over a Family of Curves Invariant to Displacement	18
5. The Integral-Geometric Problem for m Functions	28
6. Determination of a Function in a Circle from its Integrals over a Family of Curves Invariant to Rotation about Center of the Circle	30
7. Integral-Geometric Problem for Surfaces Invariant to Displacement	35
8. Integral-Geometric Problems for a Family of Curves Generated by a Riemannian Metric	43
Chapter II. Inverse Problems for Hyperbolic Linear Differential Equations	53
1. General Information Concerning the Solution of the Cauchy Problem for Linear Hyperbolic Equations	53
2. One-Dimensional Inverse Problem for the Telegraph Equation in Three-Dimensional Space	62
3. Linearized Inverse Problem for the Telegraph Equation	81
4. The Problem of Finding the Coefficients of the Lower Order Derivatives in a Second-Order Equation.	85
5. Linearized Inverse Kinematic Problem for the Wave Equation in Variable Isotropic Media	107
6. One-Dimensional Inverse Kinematic Problem for the Wave Equation in Anisotropic Media	113
7. Multidimensional Linearized Inverse Kinematic Problem for the Wave Equation in Anisotropic Media	123

Chapter III. Application of the Linearized Inverse Kinematic Problem to Geophysics	127
1. The Earth's Structure from a Geophysical Standpoint and the Problem of Determining the Velocity Structure of the Earth's Mantle	127
2. Numerical Solution of the Linearized Inverse Kinematic Problem	132
3. Some Numerical Results.	135
 Bibliography	 148
 Subject Index.	 152
