PART 1 ZERO CARBON: WHY AND HOW?	1
CHAPTER 1 Introduction.....	3
CHAPTER 2 Methods and tools for determining embodied emissions.....	13
CHAPTER 3 Methods and tools for determining operational emissions.....	20
CHAPTER 4 Weather and climate.....	52
PART 2 EMBODIED EMISSIONS CONTEXT	61
CHAPTER 5 Working out embodied emissions in a building.....	63
PART 3 OPERATIONAL EMISSIONS CONTEXT	75
CHAPTER 6 Site issues	77
CHAPTER 7 Building geometry.....	90
CHAPTER 8 Thermal insulation and airtightness.....	96
CHAPTER 9 Solar gain	110
CHAPTER 10 Solar shading design	131
CHAPTER 11 Thermal mass.....	139
CHAPTER 12 Natural and mechanical ventilation	149
CHAPTER 13 Natural daylight.....	165
CHAPTER 14 Electrical lighting and its integration with natural daylight.....	177
CHAPTER 15 Internal heat gains, heating, and cooling	185
CHAPTER 16 Renewable energy	195
PART 4 DESIGNING TRUE ZERO	209
CHAPTER 17 Designing for thermal comfort.....	211
CHAPTER 18 Designing for negative operational emissions	221
CHAPTER 19 Designing embodied and operational emissions to target a zero emissions year for a building.....	242
CHAPTER 20 Post-occupancy monitoring and performance evaluation.....	262
PART 5 PRACTICE, RESEARCH, AND POLICY DEVELOPMENT SUPPORT	289
CHAPTER 21 Practice: case studies.....	291
CHAPTER 22 Where the field is going – research and policy development support.....	357
CHAPTER 23 Conclusions and future prospects.....	383
REFERENCES.....	387
APPENDIX 1 – Occupant survey questionnaire from Case Study 1, Chapter 21	393
APPENDIX 2 – Supplementary material	396
