1	Introduction	1
1.1	Discrete Element Methods for Arbitrarily Shaped Particles	3
1.1.1	Arbitrarily Shaped DEM Model Based on Functional Representations	3
1.1.2	Arbitrarily Shaped DEM Model Based on Geometric Topology	6
1.1.3	Arbitrarily Shaped DEM Model Based on Combined Particle Approach	9
1.1.4	Novel Discrete Element Methods for Arbitrarily Shaped Particles	11
1.2	High Performance Computation of Discrete Element Methods	14
1.2.1	GPU Parallel Algorithm for Spherical Particles	15
1.2.2	GPU Parallel Algorithm for Non-spherical Particles	18
1.3	DEM Analysis of the Flow Characteristics of Granular Materials	20
1.3.1	Flow Properties of Granular Materials in Silos	20
1.3.2	Mixing and Segregation Properties of Granular Materials in Rotating Drums	25
1.4	Summary	29
	References	29
2	Superquadric DEM Model Based on Functional Representations	35
2.1	Construction of Superquadric Elements	36
2.1.1	Superquadric Elements Based on Continuous Function Representation	36
2.1.2	Calculation of Mass and Moment of Inertia	37
2.2	Contact Algorithm and Contact Force Model	39
2.2.1	Contact Detection Between Particles	39
2.2.2	Contact Detection Between Particles and Structures	40

2.2.3	Nonlinear Contact Force Model Considering Equivalent Curvature	44
2.3	Numerical Validation and Applications	46
2.3.1	Collision of Two Ellipsoidal Particles	46
2.3.2	Experimental Validation of Hopper Discharge	48
2.3.3	Analysis of the Flow Process of Granular Materials in a Silo	49
2.4	Summary	56
	References	57
3	Multi-superquadric and Poly-superquadric DEM Models	59
3.1	Discrete Element Method for Multi-superquadric Elements	60
3.1.1	Functional Representation of Multi-superquadric Elements	60
3.1.2	Calculation of Mass and Moment of Inertia	61
3.1.3	Contact Detection Between Multi-superquadric Elements	63
3.1.4	Position and Information Update of Elements	64
3.2	Discrete Element Method for Poly-superquadric Elements	65
3.2.1	Functional Representation of Poly-superquadric Elements	66
3.2.2	Calculation of Mass and Moment of Inertia	67
3.2.3	Contact Detection Between Poly-superquadric Elements	69
3.2.4	Position and Information Update of Elements	71
3.3	Numerical Validation and Applications	71
3.3.1	Theoretical Verification of a Single Particle Impacting a Plane	72
3.3.2	DEM Simulation of Flow Processes of Multi-superquadric Elements	75
3.3.3	DEM Simulation of Flow Processes of Poly-superquadric Elements	78
3.4	Summary	82
	References	83
4	Smoothed Polyhedral DEM Model Based on Minkowski Sum Algorithm	85
4.1	Dilated DEM Models of Arbitrarily Shaped Particles	86
4.1.1	Polyhedral Model Based on Geometric Topology	86
4.1.2	Dilated DEM Models Based on Fibonacci and Minkowski Sum Algorithms	87
4.1.3	Automatic Mesh Simplification Method for Dilated DEM Models	88
4.2	A Novel Minkowski Sum Contact Algorithm Between Particles	89

4.2.1	Contact Detection Between a Dilated Triangular Element and a Sphere	91
4.2.2	Contact Detection Between a Dilated Triangular Element and a Cylinder	93
4.2.3	Contact Detection Between Two Dilated Triangular Faces	95
4.2.4	Contact Force Model Between Particles	97
4.3	Numerical Validation and Applications	98
4.3.1	Elastic Collision Between Two Particles	98
4.3.2	Inelastic Collision Between Two Particles	103
4.3.3	Packing Process of Multiple Particles	104
4.3.4	Engineering Applications of Mixed Granular Materials	108
4.4	Summary	110
	References	112
5	Arbitrarily Shaped DEM Model Based on Level Set Method	115
5.1	Modeling Methodology of Arbitrarily Shaped Elements	116
5.1.1	Superquadric Equation	116
5.1.2	Spherical Harmonic Function	117
5.1.3	Polyhedron Method	118
5.2	Contact Algorithm Between Arbitrarily Shaped Particles	119
5.2.1	Creation of the Zero Level Set Function	119
5.2.2	Creation of the Spatial Level Set Function	121
5.2.3	Calculation of Contact Points	124
5.2.4	Calculation of Contact Forces	126
5.3	Contact Algorithm Between Particles and Structures	127
5.3.1	Particle-Plane Contact Detection	128
5.3.2	Particle-Edge Contact Detection	129
5.3.3	Particle-Vertex Contact Detection	130
5.4	Numerical Verification and Application	131
5.4.1	Collision Between a Single Particle and a Wall	131
5.4.2	Packing Process of Multiple Particles	134
5.4.3	Engineering Applications of Mixed Granular Materials	138
5.5	Summary	140
	References	143
6	High Performance Computation and DEM Software Development	145
6.1	Modeling Methodology of Arbitrarily Shaped Elements	146
6.1.1	Non-spherical Particles Represented by Superquadric Equations	146
6.1.2	Motion Equation of Superquadric Particles	147
6.2	GPU Parallel Computing Based on CUDA Architecture	148
6.2.1	Spatial Grid Partitioning and Neighbor List Generation	148
6.2.2	Bounding Box and Newton Iterative List Generation	154

6.2.3	Contact Force Calculation and Element Information Updating	157
6.3	Domestic and Foreign DEM Software Development	159
6.3.1	Development of Foreign DEM Software	159
6.3.2	Development of Domestic DEM Software	163
6.4	Computational Analysis Software SDEM	167
6.4.1	Introduction to the Software SDEM	168
6.4.2	Million-Scale Granular Materials	171
6.4.3	Flow Process of Large-Scale Granular Materials	172
6.4.4	Comparison of GPU and CPU Computational Speed	173
6.4.5	Mixing Process of Large-Scale Granular Materials	176
6.5	Summary	179
	References	179
7	DEM Analysis of Flow Characteristics of Non-spherical Particles	181
7.1	Analysis of Buffering Performance of Irregular Granular Materials	182
7.1.1	Experimental Verification of the Impact Process of Granular Materials	182
7.1.2	Effect of Granular Layer Thickness on the Buffering Performance	183
7.1.3	Effect of Particle Shapes on the Impact Force	185
7.2	Flow Characterization of Irregular Particles Driven by Gravity	189
7.2.1	Influence of Particle Shape on Granular Flow Rate	190
7.2.2	Transition of Granular Flow Pattern	193
7.2.3	Analysis of Initial Stacking Characteristics and Normal Contact Forces	200
7.3	Mixing Characteristics of Granular Materials in a Horizontal Rotating Drum	201
7.3.1	Effect of Rotation Speeds on the Mixing Process of Granular Materials	202
7.3.2	Effect of Particle Shapes on the Mixing Process of Granular Materials	209
7.3.3	Analysis of Translational and Rotational Kinetic Energies of Particles	210
7.4	Radial Segregation Characteristics of Particles in a Horizontal Rotating Drum	212
7.4.1	Effect of Particle Shapes on the Segregation Process of Particles	212
7.4.2	Effect of Standard Deviation on the Segregation Process of Particles	222
7.4.3	Effect of Rotation Speeds on the Segregation Process of Particles	224
7.5	Summary	229
	References	230
