Preface *xxi*
Acknowledgment *xxvii*

1 Coordinate Systems and Motion Modeling 1
1.1 Introduction 1
1.2 Points, Vectors, and Matrices 1
1.2.1 Point, Set, Field, and Space 1
1.2.1.1 Points and Coordinates 1
1.2.1.2 Euclidean Space 2
1.2.1.3 Other Popular Spaces 2
1.2.2 Vectors 2
1.2.2.1 Equivalent Vector 3
1.2.2.2 Vector Space 3
1.2.2.3 Linear Independence, Orthonormality, and Basis Vectors 4
1.2.2.4 Dot Product and Inner Product 6
1.2.2.5 Euclidean Norm (Magnitude) 6
1.2.2.6 Cross Product and the Skew Matrix 7
1.2.3 Matrices 8
1.2.3.1 Range, Rank, and Null Space of a Matrix 8
1.2.3.2 Eigenvalues, Eigenvectors, and Eigenvalue Decomposition (EVD) 9
1.2.3.3 Matrix Symmetry 10
1.2.3.4 Matrix Norm 10
1.2.3.5 Singular Value Decomposition (SVD) 11
1.2.3.6 Differentiations with Respect to Vectors and Matrices 12
1.3 Coordinate Frames and Systems 12
1.3.1 Rectangular Cartesian Coordinate Frames 12
1.3.2 Polar and Spherical Coordinate Systems 13
1.3.3 Earth Coordinate Systems and Parameters 14
1.3.3.1 Earth Shape and Coordinate System 15
1.3.3.2 Geodetic Coordinates and World Geodetic System (WGS84) 16
1.3.3.3 Earth-Centered-Earth-Fixed (ECEF) Rectangular Coordinate System 17
1.3.3.4 Earth-Centered-Inertial (ECI) Frame 17
1.3.3.5 Local-level (Tangent) Frames (*L* and *N* Frames) 17
1.3.3.6 Body Frame (*B*) 18

1.3.3.7	Conversion Between Geodetic Coordinates and ECEF Coordinates	18
1.4	Transformation Between Frames	19
1.4.1	Direction Cosine Matrix	19
1.4.2	Conversion from Local Frames to ECEF Frame	22
1.4.3	Transformation Groups	22
1.4.4	General Linear Group	23
1.4.5	Affine Group $A(n)$ and Affine Transformation	23
1.4.6	The Orthogonal Group $O(n)$ and Special Orthogonal Group $SO(3)$	24
1.4.7	The Special Euclidean Group $SE(n)$	24
1.4.8	Lie Group	25
1.5	The Mathematics of Rigid Body Motion in 3D Space	26
1.5.1	Basic Definitions	26
1.5.2	Modeling Rotation	27
1.5.2.1	Rotation Rate Equation	27
1.5.2.2	Rotation Vector Change	29
1.5.2.3	Exponential Mapping	29
1.5.2.4	Rotation Vector and Rodrigues' Formula	31
1.5.2.5	Logarithmic Mapping	32
1.5.2.6	Euler Angles	33
1.5.2.7	Quaternion	35
1.5.3	Modeling Rotation and Translation	37
1.6	Problems	40
1.6.1	Problem 1	40
1.6.2	Problem 2	40
1.6.3	Problem 3	40
1.6.4	Problem 4	40
1.6.5	Problem 5	41
1.6.6	Problem 6	41
1.6.7	Problem 7	41
1.6.8	Problem 8	42
1.6.9	Problem 9	42
1.6.10	Problem 10	42
	References	43

2 Signals and Systems 45

2.1	Introduction	45
2.2	Probability	45
2.2.1	Sample Points, Sample Space, and Events	45
2.2.2	Probability Distribution	46
2.2.3	Discrete vs. Continuous Probability	46
2.2.4	Statistical Moments	47
2.2.5	Vector Random Variables	49
2.2.6	Transformation of Random Variables	49
2.2.7	Probability Axioms	50
2.2.8	Bayes' Rule	50
2.2.9	Bayesian Networks	51

2.2.10	Markov Sequences	52
2.2.11	Marginal Probability (the Sum Rule)	52
2.2.12	Gaussian (Normal) Probability Distribution	52
2.2.13	Multivariate Normal (MVN) Distribution	53
2.2.14	Inference in Multivariate Normal Distribution	54
2.2.15	Central Limit Theorem	54
2.3	Systems	55
2.3.1	Differential Equations	56
2.3.1.1	Linear System Example	57
2.3.1.2	Nonlinear System Example	58
2.3.2	State Space Model	58
2.3.2.1	System Model	58
2.3.2.2	Measurement Model	60
2.3.3	Transfer Function	61
2.3.3.1	Laplace Transform	61
2.3.3.2	Impulse Response	61
2.3.3.3	Transfer Function from Differential Equation	63
2.3.3.4	Transfer Function Example	63
2.3.4	Stochastic Systems	64
2.3.4.1	Gauss-Markov Processes	65
2.3.4.2	Propagation of the Mean	66
2.3.4.3	Propagation of the Covariance	66
2.3.5	Control Systems	67
2.3.6	Linearization	69
2.3.7	Numerical Solution	70
2.4	Signals	71
2.4.1	Continuous vs. Discrete Signals	71
2.4.2	Analog vs. Digital Signals	72
2.4.3	Periodic vs. Nonperiodic Signals	72
2.4.3.1	Phasor Form of Sinusoidal Signals	73
2.4.3.2	In-Phase/Quadrature (I/Q) Form of Sinusoidal Signals	74
2.4.4	Deterministic vs. Random/Pseudorandom Signals	75
2.5	Random Processes	76
2.5.1	Statistical Properties of Random Processes	78
2.5.2	Stationary Random Processes	78
2.5.3	Ensemble Average vs. Temporal Average	79
2.5.4	Examples of Random Processes	81
2.5.4.1	Random Walk	81
2.5.4.2	First-order Gauss-Markov	81
2.6	Signal Processing Basics	82
2.6.1	Fourier Analysis	82
2.6.1.1	Fourier Series	83
2.6.1.2	Fourier Transform	85
2.6.1.3	Power Spectral Density (PSD)	89
2.6.1.4	Frequency Bands	91
2.6.2	Digital Signal Processing	91
2.6.2.1	Analog Digital Conversion	91

2.6.2.2	Sampling and Nyquist Theorem	92
2.6.2.3	Discrete Fourier Analysis	95
2.6.3	Digital Filters	97
2.7	Problems	100
2.7.1	Problem 1	100
2.7.2	Problem 2	101
2.7.3	Problem 3	101
2.7.4	Problem 4	102
2.7.5	Problem 5	102
	References	102

3 Sensor Fusion Methods and Algorithms 103

3.1	Introduction	103
3.2	Estimation Philosophy	103
3.3	Gauss-Markov Process Model	104
3.4	State Estimation	105
3.4.1	Linear Estimation	108
3.4.2	Least Squares	108
3.4.3	Integer Least-squares Algorithm	110
3.4.4	Kalman Filter	112
3.4.4.1	Prediction	112
3.4.4.2	Update	113
3.4.5	Nonlinear Estimation	113
3.4.6	Nonlinear Least-Squares	114
3.4.7	Newton Method	115
3.4.8	Gauss-Newton Method	115
3.4.9	Levernberg-Marquardt Method	116
3.4.10	Extended Kalman Filter	117
3.4.10.1	Prediction	118
3.4.10.2	Update	118
3.4.11	Particle Filter	119
3.4.11.1	Motivation	119
3.4.11.2	Particles Cloud	119
3.4.11.3	Sampling Methods	120
3.4.11.4	Prediction Using Importance Sampling	121
3.4.11.5	Measurement Update	122
3.4.12	Unscented Kalman Filter	123
3.4.12.1	UKF Prediction	124
3.4.12.2	UKF Update	124
3.4.13	Hybrid Filtering (Combining PF and KF: Rao-Blackwellized Particle Filter)	125
3.4.14	Graph Optimization	125
3.4.15	Hidden Markov Models and Viterbi Algorithm	128
3.4.15.1	First-Order Markov Process	128
3.4.15.2	Forward-Backward Algorithm	129
3.4.15.3	Viterbi Algorithm	130
3.5	Machine Learning and Artificial Intelligence	131

3.5.1	Motivation	131
3.5.2	Basic Definitions	131
3.5.3	Risks of ML and AI	133
3.5.4	Mathematical Foundation	133
3.5.4.1	Regression	134
3.5.4.2	Classification	137
3.5.5	Artificial Neural Networks (ANN)	142
3.5.5.1	Basic Definitions	142
3.5.5.2	Training Neural Networks	144
3.5.5.3	Neuron Learning	146
3.5.5.4	Backpropagation Learning	147
3.5.5.5	Other Learning Methods	149
3.5.5.6	Local Minima and Overfitting	149
3.5.5.7	Types of ANN	149
3.5.5.8	Radial Basis Function ANN (RBF-ANN)	150
3.5.5.9	Recurrent ANN (RANN) and LSTM Networks	151
3.5.5.10	Convolutional Neural Networks	153
3.5.6	Reinforcement Learning	156
3.5.7	Decision Trees	157
3.5.8	Genetic Algorithms	157
3.5.9	Fuzzy Systems	160
3.5.10	Hybrid ML/AI Systems	163
3.6	Multisensor Temporal and Spatial Extrinsic Calibration	164
3.7	Problems	165
3.7.1	Problem 1	165
3.7.2	Problem 2	165
3.7.3	Problem 3	166
3.7.4	Problem 4	166
	References	166
4	Inertial Sensors and Inertial Navigation Systems	169
4.1	Introduction	169
4.2	Inertial Measurements	169
4.2.1	Accelerometers	169
4.2.2	Gyroscopes	171
4.2.3	Magnetometer	172
4.2.4	Units of Measurements	174
4.3	Earth Gravity/Rotation/Curvature Effects on Inertial Measurements	174
4.3.1	Gravity Effect on Accelerometers	175
4.3.2	Earth Rotation Rate	176
4.3.3	Gyrocompassing	177
4.3.4	Transport Rate	178
4.3.5	Coriolis Effect	178
4.4	Inertial Measurement Unit	178
4.5	Inertial Sensor Errors	180
4.5.1	Systematic Errors	180
4.5.2	Stochastic Errors	180
4.5.3	IMU Error Analysis using Allan Variance	182

- 4.5.3.1 Allan Variance 182
- 4.5.3.2 Allan Variance Example of Different IMU Grades 184
- 4.6 Inertial Navigation Systems (INS) 188
 - 4.6.1 Forward Kinematics Equations 188
 - 4.6.1.1 Orientation Rate Equation 188
 - 4.6.1.2 Velocity and Position Rate Equations 190
 - 4.6.1.3 MATLAB Implementation of 3D Inertial Navigation System 190
 - 4.6.2 INS System Error Model 192
 - 4.6.2.1 INS Error States and Error Model 194
- 4.7 Problems 201
 - 4.7.1 Problem 1 201
 - 4.7.2 Problem 2 201
 - 4.7.3 Problem 3 201

 - 4.7.5 Problem 5 201
- References 202

5 Radio Positioning Systems 203

- 5.1 Introduction 203
- 5.2 Concept of Operation 203
- 5.3 The Electromagnetic Waves and Radio Spectrum 205
- 5.4 Radio Positioning Transmitter 206
- 5.5 Positioning Signal Structure 207
 - 5.5.1 Carrier Wave 207
 - 5.5.2 Navigation Data 208
 - 5.5.3 Positioning Code 208
 - 5.5.4 Modulated Signal 213
- 5.6 Receiver Signal Processing 214
 - 5.6.1 Front-End Module 214
 - 5.6.1.1 Main Components of Front-End 214
 - 5.6.1.2 Frequency Down Conversion and Doppler Frequency 215
 - 5.6.2 Acquisition Module 216
 - 5.6.2.1 Code Phase/Delay Search 216
 - 5.6.2.2 Matched Filter 218
 - 5.6.2.3 Carrier Frequency Search 219
 - 5.6.3 Tracking Module 221
 - 5.6.3.1 Delay Lock Loop (DLL) 222
 - 5.6.3.2 Phase Lock Loop (PLL) 224
 - 5.6.3.3 PLL Control Filter 226
 - 5.6.3.4 Carrier-phase Measurements 227
 - 5.6.3.5 Code and Carrier Tracking Combined 227
- 5.7 Radio Positioning Schemes 228
 - 5.7.1 Time of Flight (ToF) 228
 - 5.7.1.1 ToF Measurement Model Equation 229
 - 5.7.1.2 Trilateration Positioning Algorithm 230
 - 5.7.2 Time Difference of Arrival (TDoA) 232

5.7.2.1	Anchor-Initiated TDoA (AITDoA)	232
5.7.2.2	User-Initiated TDoA (UITDoA)	232
5.7.2.3	TDoA Measurement Model and Positioning Algorithm	233
5.7.3	Round Trip Delay (RTD)	234
5.8	Dilution of Precision (DOP)	234
5.9	GNSS Technology	235
5.9.1	GNSS Overview	236
5.9.2	The Global Positioning System (GPS)	238
5.9.2.1	GPS System Overview	238
5.9.2.2	GPS Signals and Communication Protocol	239
5.9.2.3	GPS Receiver Overview	243
5.9.2.4	GPS Example from MATLAB Satellite Communication Toolbox	245
5.10	GNSS Positioning Methods	249
5.10.1	Single Point Positioning	249
5.10.2	Velocity Estimation	252
5.10.3	Joint Position and Velocity Estimation	254
5.10.4	Using Carrier-phase Observations	254
5.10.5	Carrier-Smoothed Positioning	255
5.10.6	Differential Positioning	256
5.10.7	Single-Difference DGNS	256
5.10.8	Double-Difference DGNS	257
5.10.9	Triple-Difference DGNS	258
5.10.10	Precise Point Positioning	258
5.10.11	Real-Time Kinematics (RTK)	258
5.10.12	GNSS Assistance and Augmentation Systems	258
5.11	GPS SPS MATLAB Project Sample	259
5.12	Sagnac Effect	261
5.13	Problems	264
5.13.1	Problem 1	264
5.13.2	Problem 2	264
5.13.3	Problem 3	264
5.13.4	Problem 4	264
5.13.5	Problem 5	264
5.13.6	Problem 6	265
5.13.7	Problem 7	265
