1	Introduction	1
1.1	Basic Hypotheses of Elastic Solids	2
1.2	Brief History of Elastic Solid Mechanics	3
	References	5
2	Analysis of Stress	7
2.1	Traction, Stress Tensor and Cauchy Formula	7
2.1.1	Traction (or Stress Vector)	9
2.1.2	Stress Tensor	10
2.1.3	Cauchy Formula	12
2.2	Index Notation and Transformation of Coordinates	14
2.2.1	Index Notation for Vectors, Tensors and Equations	15
2.2.2	Coordinate Transformation of Components of Traction and Stress Tensor	19
2.3	Principal Stresses and Stress Invariants	23
2.3.1	Principal Stresses and Principal Stress Directions	23
2.3.2	Stress Invariants	26
2.4	Maximum Shear Stress	27
2.5	Hydrostatic Stress, Deviatoric Stress and von Mises Stress	32
2.6	Equations of Motion (or Equilibrium)	35
	References	41
3	Analysis of Deformation	43
3.1	One-Dimensional Deformation	43
3.1.1	Strain-Displacement Relations for Uniform Deformation	44
3.1.2	Strain-Displacement Relations for Non-uniform Deformation	45
3.2	Displacement Field and Deformation Gradient	48
3.3	Stretch Tensors and Strain Measures	54
3.3.1	Elongation of a Differential Line	56
3.3.2	Change in Angle Between Any Two Line Elements	58

3.3.3	Typical Three-Dimensional Strain Measures	60
3.4	Principal Deformation Directions, Principal Stretches and Deformation Invariants	68
3.4.1	Principal Deformation Directions and Principal Stretches	68
3.4.2	Deformation Invariants	74
3.5	Strain-Displacement Relation	76
3.5.1	Explicit Strain-Displacement Relations	76
3.5.2	Calculation of Engineering Strain, Logarithmic Strain and Cauchy Strain from a Displacement Field	77
3.6	Deformation Rate and Material Derivative	82
3.7	Infinitesimal Strain and Infinitesimal Deformation	84
3.7.1	Infinitesimal Strain	84
3.7.2	Infinitesimal Deformation	87
3.8	Strain Compatibility for Infinitesimal Deformation	89
	References	93
4	Constitutive Equations	95
4.1	Hooke's Law for Isotropic Materials Undergoing Infinitesimal Deformation	95
4.1.1	Determination by Conducting Material Mechanics Experiments	96
4.1.2	Strain Energy Density	102
4.1.3	Stress Derived from Strain Energy Density Function	107
4.2	Hooke's Law for Anisotropic Materials Undergoing Infinitesimal Deformation	107
4.2.1	Orthotropic Materials	109
4.2.2	Transversely Isotropic Materials	111
4.3	Stress-Strain Relation for Infinitesimal Strain but Large Rotation	112
4.4	Hyperelasticity	115
4.4.1	Stress Derived from Strain Energy Density Function	115
4.4.2	Incompressible Materials	118
4.4.3	Strain Energy Density Functions for Isotropic Incompressible Materials	119
4.4.4	Determination of Material Constants of Incompressible Materials	120
4.4.5	Strain Energy Density Functions for Isotropic Compressible Materials	122
	References	125

5	Construction of Elastic Solid Mechanics Models for Actual Problems	127
5.1	Constructing an Elastic Solid Mechanics Model	127
5.1.1	Deciding What Mechanical Quantities to Compute	128
5.1.2	Defining the Geometry of the Model	129
5.1.3	Defining Material Behavior	131
5.1.4	Field Equations	132
5.1.5	Simplifying Loads and Replicating Boundary Conditions	133
5.1.6	Interface Models	141
5.1.7	Examples for Constructing Elastic Solid Mechanics Models	143
5.2	Boundary Value Problems of Mechanical Models	145
	References	152
6	Solutions for Infinitesimal Plane Stress and Strain Problems	153
6.1	Plane Stress and Plane Strain Models	153
6.1.1	Plane Strain Model	153
6.1.2	Plane Stress Model	155
6.1.3	Basic Equations for Boundary Value Problems in Cartesian Coordinates	156
6.2	Airy Stress Function in Cartesian Coordinates	158
6.3	Solutions for Rectangular Beams by Polynomial Stress Functions	159
6.4	Solutions for Rectangular Beams by Separation of Variables	176
6.5	Airy Stress Function Solutions in Polar Coordinates	180
6.5.1	General Equations	181
6.5.2	Solutions for Typical Problems	182
	Reference	207
7	Solutions for Infinitesimal Three-Dimensional Problems	209
7.1	Two Mathematical Tools	209
7.1.1	Integration by Parts for Higher Dimensions	209
7.1.2	Solution of Poisson's Equation by Green's Function	212
7.2	Helmholtz's Decomposition of Displacement and Body Force	214
7.3	A Particular Solution of Navier's Equation with Body Force	216
7.4	Papkovich–Neuber's Solution	220
7.5	Indentation of an Elastic Half-Space by a Flat Rigid Punch	226
7.6	Frictionless Contact Between Two Elastic Spheres	229

8	Multiphysics Field Problems	235
8.1	Eigen-Strain and Its Physical Origins	235
8.2	Generalized Hooke's Law Involving Eigen-Strain	238
8.3	One-Way Coupling Initial-Boundary Value Problems for Isotropic Solids	241
8.4	One Dimensional Problems of Eigen-Strain	244
8.4.1	Inhomogeneous Eigen-Strain in a Plate	244
8.4.2	Inhomogeneous Eigen-Strain in Spheres	249
8.4.3	Inhomogeneous Eigen-Strain in Disks and Cylinders	252
8.5	Eshelby Inclusion Problems	256
8.6	Displacement Potential Method for Eigen-Strain Problems	261
8.7	Brief Introduction to Two-Way Coupling Problems	266
	References	269
9	Variational Methods for Infinitesimal Deformation Problems	271
9.1	Variation of Functionals	271
9.2	Principles of Virtual Work and Complementary Virtual Work	276
9.3	Principle of Minimum Potential Energy	282
9.4	Applications of Principle of Minimum Potential Energy for Reducing Dimensionality of Models	284
9.4.1	Elementary Theory of Beams	284
9.4.2	Saint-Venant Torsion of Shafts	290
9.5	Rayleigh-Ritz Method	294
9.6	Principle of Minimum Complementary Energy	297
9.7	Applications of Principle of Minimum Complementary Energy	300
9.7.1	Derivation of the Governing Equations of Saint-Venant Torsion	300
9.7.2	Numerical Solution for Problems of Saint-Venant Torsion	303
	References	306
10	Thin Plates and Circular Cylindrical Shells	307
10.1	Basic Equations of Thin Plates	307
10.2	Solutions for Bending of Thin Plates	318
10.2.1	Pure Bending of Rectangular Plates	318
10.2.2	Simply Supported Rectangular Plates	320
10.2.3	Rectangular Plates Simply Supported at Two Opposite Edges	322
10.2.4	Axisymmetric Bending of Circular Plates	325
10.3	Vibration of Thin Plates	327
10.3.1	Free Vibration of Simply Supported Rectangular Plates	328

10.3.2	Free Vibration of Rectangular Plates Simply Supported at Two Opposite Edges	331
10.4	Buckling of Thin Plates Under Compression	333
10.4.1	Buckling of Simply Supported Rectangular Plates Under Compression	334
10.4.2	Buckling of Circular Plates	336
