Foreword.....	3
1 Scope	4
2 Normative references	4
3 Relevant quantities	4
3.1 Quantities to express building performance	4
3.1.1 Sound power level L_w	4
3.1.2 Directivity correction D_c	4
3.2 Quantities to express element performance.....	5
3.2.1 Sound reduction index R	5
3.2.2 Element normalized level difference $D_{n,e}$	5
3.2.3 Insertion loss D (of an element)	5
3.2.4 Other relevant data	5
3.3 Other terms and quantities	5
3.3.1 Sound pressure level L_p	5
3.3.2 Total attenuation due to propagation A_{tot}	5
3.3.3 Diffusivity term C_d	5
3.3.4 Inside sound pressure level $L_{p,in}$	5
3.3.5 Substitute point source	6
4 Calculation model	6
4.1 General principles.....	6
4.2 Determination of substitute point sound sources.....	7
4.3 Determination of the sound power level for a substitute point source.....	7
4.4 Determination of the directivity correction for a substitute point source	9
4.5 Limitations	9
5 Accuracy	10
Annex A (normative) List of symbols.....	11
Annex B (informative) Interior sound field.....	12
Annex C (informative) Sound reduction index	13
Annex D (informative) Directivity of sound radiation	14
D.1 Plane radiator	14
D.2 Openings.....	14
Annex E (informative) Simplified model to predict exterior sound pressure levels	15
Annex F (informative) Application of the model to single number ratings	18
F.1 General.....	18
F.2 Input data	18
F.3 Model for single number ratings	18
F.4 Limitations	19
Annex G (informative) Calculation example	20
G.1 Situation.....	20
G.2 Results complete model.....	21
G.2.1 Substitute point sources	21
G.3 Results from simplified model.....	24
