
Table of Contents

Part I. General Fundamentals of Surface Engineering

1. The concept of surface engineering	1
1.1 The term "surface engineering"	1
1.2 Scope of topics forming the concept of surface engineering	3
References	5
2. Development of surface engineering	7
2.1 History of development of surface engineering .	7
2.1.1 General laws of development	7
2.1.2 History of development of metallic structural materials	7
2.1.3 History of development of the technology of surface improvement of structural materials	11
2.2 Surface engineering today	20
2.2.1 General areas of activity of surface engineering	20
2.2.2 Significance of surface engineering	22
2.3 Directions of development of surface engineering	23
2.3.1 Perfection and combination of methods of manufacturing of surface layers	23
2.3.2 Design of surface layers, based on mathematical modeling	25
2.3.3 Micro and nanometric testing	26
2.3.4 Rational application of surface layers	26
References	27
3. The solid surface	29
3.1 The significance of the surface	29
3.2 The surface - geometrical concept	30
3.3 The surface - mechanical concept	30
3.4 The surface - physico-chemical concept	32
3.4.1 The phase	32
3.4.2 Interphase surface - a physical surface	33
3.4.3 Surface energy	34

3.4.4 Surface phenomena	38
References	40
4. Surface layers 41	
References	43
5. The superficial layer 45	
5.1 Development of concepts regarding the superficial layer	45
5.2 Shaping of the superficial layer	48
5.3 Structure of the superficial layer	52
5.3.1 Simplified models of the superficial layer	52
5.3.2 The developed model of the superficial layer	57
5.4 A general characteristic of the superficial layer obtained by machining	60
5.5 Physical description of the superficial layer	63
5.6 Strengthening and weakening of the superficial layer	64
5.7 Potential properties of the superficial layer	65
5.7.1 Geometrical parameters of the superficial layer	67
5.7.1.1 Three-dimensional structure of the surface	67
5.7.1.2 Surface roughness.....	68
5.7.1.3 Structural flaws of the three-dimensional surface	73
5.7.2 Stereometric-physico-chemical parameters of the superficial layer	74
5.7.2.1 Emissivity	74
5.7.2.2 Reflectivity	78
5.7.3 Physico-chemical parameters of the superficial layer	78
5.7.3.1 General characteristic	78
5.7.3.2 Metallographic structure	79
5.7.3.3 Hardness	81
5.7.3.4 Brittleness	83
5.7.3.5 Residual stresses	84
5.7.3.6 Absorption	96
5.7.3.7 Adsorption	96
5.7.3.8 Solubility	105
5.7.3.9 Diffusion	106
5.7.3.10 Adhesion	113
5.7.3.11 Catalysis.....	117
5.8 Practically usable properties of the superficial layer	123

5.8.1 Strength properties	124
5.8.1.1 General characteristic	124
5.8.1.2 Fatigue strength	125
5.8.2 Tribological properties	135
5.8.2.1 Types of basic tribological properties	135
5.8.2.2 Types of friction	135
5.8.2.3 Sliding friction	139
5.8.2.4 Rolling friction	141
5.8.2.5 The role of surface in the friction process	142
5.8.2.6 Thermal effects of friction	143
5.8.2.7 Lubrication	144
5.8.2.8 Tribological wear and its various versions	147
5.8.2.9 Factors affecting tribological wear	158
5.8.2.10 Non-wear friction (selective carryover)	162
5.8.2.11 Limiting tribological wear	165
5.8.3 Anti-corrosion properties	166
5.8.4 Decorative properties	169
5.9 The significance of the superficial layer	169
References	169

6. Coatings 175

6.1 The concept of the coatings	175
6.2 Structure of the coating	175
6.3 Types of coatings	177
6.3.1 Division of coatings by material	177
6.3.1.1 Metallic coatings	177
6.3.1.2 Non-metallic coatings	178
6.3.2 Classification of coatings by application	183
6.3.2.1 Protective coatings	183
6.3.2.2 Decorative coatings	185
6.3.2.3 Protective-decorative coatings	186
6.3.2.4 Technical coatings	187
6.3.3 Classification of coatings by manufacturing methods	189
6.3.3.1 Galvanizing	191
6.3.3.2 Immersion coatings	193
6.3.3.3 Spray coatings	195
6.3.3.4 Cladded coatings	197
6.3.3.5 Crystallizing coatings	199
6.4 Potential properties of coatings	199
6.4.1 Geometrical parameters of coatings	200
6.4.1.1 Thickness	200
6.4.1.2 Three-dimensional structure of the surface	201

6.4.1.3 Surface unevenness	201
6.4.1.4 Defects of the three-dimensional structure	201
6.4.2 Geometric and physico-chemical parameters of coatings	202
6.4.3 Physico-chemical parameters of coatings	202
6.4.3.1 General characteristic	202
6.4.3.2 Structure of metallic coatings	203
6.4.3.3 Residual stresses	206
6.4.3.4 Adhesion	207
6.4.3.5 Hardness	208
6.4.3.6 Ductility (elasticity)	209
6.4.3.7 Electrical properties	209
6.4.3.8 Magnetic properties	210
6.5 Service properties of coatings	210
6.5.1 Anti-corrosion properties	210
6.5.1.1 Types of corrosion	210
6.5.1.2 Corrosion resistance	213
6.5.1.3 Porosity	214
6.5.1.4 Bulging	216
6.5.1.5 Permeability	217
6.5.2 Decorative properties	219
6.5.2.1 External appearance	219
6.5.2.2 Color	220
6.5.2.3 Luster	221
6.5.2.4 Coverability	222
6.5.2.5 Specific decorative properties	222
6.6 Significance and directions of development of coatings	223
References	229

Part II. *The newest techniques of producing surface layers*

1. Formation of technological surface layers 235

1.1 Techniques of formation of technological surface layers	235
1.1.1 Mechanical techniques	235
1.1.2 Thermo-mechanical techniques	238
1.1.3 Thermal techniques	240
1.1.4 Thermo-chemical techniques	241
1.1.5 Electrochemical and chemical techniques	243

1.1.6	Physical techniques	246
1.2	Classification of techniques of producing technological surface layers	247
	References	250

2. Electron beam technology 253

2.1	Advent and development of electron beam technology	253
2.2	Physical principles underlying the functioning of electron beam equipment	255
2.2.1	Electron emission	255
2.2.2	Thermoelectron emission	255
2.2.3	Utilization of plasma as a source of electrons	256
2.2.4	Acceleration of electrons	257
2.2.5	Electron beam control	258
2.2.6	Vacuum in electron equipment	260
2.3	Electron beam heaters	261
2.3.1	Electron guns	261
2.3.1.1	Thermal emission guns	261
2.3.1.2	Plasma emission guns	262
2.3.2	Design of electron beam heaters	264
2.3.3	Types of beams and patterns	264
2.4	Physical fundamentals of interaction of electron beam with treated material	267
2.4.1	Mechanism of interaction of electron beam with treated material	267
2.4.2	Efficiency of electron beam heating	270
2.4.3	Rate of heating and cooling	273
2.5	Electron beam techniques	275
2.5.1	Remelt-free techniques	278
2.5.1.1	Annealing and tempering	278
2.5.1.2	Remelt-free hardening	279
2.5.2	Remelt techniques	287
2.5.2.1	Surface remelting	287
2.5.2.2	Alloying	292
2.5.2.3	Cladding	295
2.5.3	Evaporation techniques	295
2.5.4	Applications of electron beam heating in surface engineering	296
	References	300

3. Laser technology 307

3.1	Development of laser technology	307
-----	---------------------------------------	-----

3.2 Physical fundamentals of lasers	309
3.2.1 Spontaneous and stimulated emission	309
3.2.2 Laser action	312
3.2.2.1 Inversion of occupation of energy levels	312
3.2.2.2 Optical resonator	314
3.2.3 Single-mode and multi-mode laser beams	318
3.3 Lasers and laser heaters	321
3.3.1 General design of lasers	321
3.3.2 Molecular CO ₂ lasers	322
3.3.2.1 General characteristic	322
3.3.2.2 Lasers with slow longitudinal flow (diffusion cooled)	323
3.3.2.3 Lasers with fast longitudinal flow	325
3.3.2.4 Lasers with transverse flow	326
3.3.3 Solid Nd-YAG lasers	327
3.3.4 Continuous and pulse laser operation	328
3.3.5 Laser heaters and machinetools	330
3.4 Physical fundamentals of laser heating	332
3.4.1 Properties of laser heating	332
3.4.2 The role surface absorption in laser heating	333
3.4.3 Depth of penetration of photons into the metal	335
3.4.4 Laser heating stages	337
3.4.5 Temperature distribution in laser-heated material	340
3.4.6 Laser beam control	347
3.5 Laser techniques	350
3.5.1 Remelting-free techniques	352
3.5.1.1 Annealing and tempering, preheating	352
3.5.1.2 Remelt-free hardening	354
3.5.1.3 Surface cleaning	362
3.5.2 Remelting techniques	362
3.5.2.1 Surface remelting	362
3.5.2.2 Alloying	372
3.5.2.3 Cladding	381
3.5.3 Evaporation techniques	385
3.5.3.1 Pure evaporation	385
3.5.3.2 Detonation hardening	385
3.5.3.3 Ablation cleaning	388
3.5.4 Laser techniques for formation of thin and hard coatings	389
3.5.4.1 Coating formation by the fusion alloying in gas method	389
3.5.4.2 Formation of coatings by the pure vapour deposition method	390

3.5.4.3	Pyrolytic and photochemical formation of coatings	391
3.5.4.4	Formation of coatings by chemical methods (LCVD)	393
3.6	Application of laser heating in surface engineering	394
	References	398
4.	Implantation techniques (ion implantation) 413	
4.1	Development of ion implantation technology ...	413
4.1.1	Chronology of development	413
4.1.2	General characteristic of plasma and beam implantation of ions	414
4.2	Plasma source ion implantation	415
4.3	Physical principles of ion beam implantation ...	417
4.3.1	Continuous ion beam implantation	417
4.3.2	Pulse ion beam implantation	425
4.4	Ion beam implantation equipment	425
4.4.1	Continuous ion beam implanters	426
4.4.2	Pulse ion implanters	437
4.5	Ion beam implantation techniques	438
4.6	Modification of properties of implanted materials	443
4.6.1	Tribological properties of implanted materials ..	445
4.6.2	Strength properties of implanted materials	453
4.6.3	Hardness and adhesion of implanted materials	455
4.6.4	Corrosion resistance of implanted materials	457
4.6.5	Other properties of implanted materials	459
4.7	Application of implantation technology	459
4.8	Advantages and disadvantages of ion implantation techniques	464
	References	466
5.	Glow discharge methods and CVD technology 475	
5.1	Conception and development of glow discharge methods	475
5.2	Physico-chemical basis of glow discharge process treatment	475
5.2.1	Glow discharge	476
5.2.2	Interaction between ions and metals	486
5.2.2.1	Ion sputtering	487
5.2.2.2	The role of ion sputtering in glow discharge treatments	489

5.2.3 Chemisorption in glow discharge treatments	493
5.3 Glow discharge furnaces	497
5.4 Glow discharge applications	503
5.4.1 Glow discharge nitriding	503
5.4.2 Glow discharge boriding	508
5.5 CVD methods	512
References	520
6. Vacuum deposition by physical techniques (PVD) 525	
6.1 Development of PVD techniques	525
6.2 PVD techniques	527
6.2.1 General characteristic	527
6.2.2 Classification of PVD techniques	529
6.2.3 Discussion of more important PVD techniques .	535
6.2.3.1 Techniques utilizing simultaneous evaporation of substrate from entire liquid surface	535
6.2.3.2 Techniques utilizing local evaporation	538
6.2.3.3 Techniques utilizing direct sputtering	540
6.2.3.4 Techniques utilizing deposition from ion beams.	543
6.3 Equipment for coating deposition by PVD techniques	544
6.4 Coatings deposited by PVD techniques	551
6.4.1 Coating material	551
6.4.2 Types of coatings	556
6.4.2.1 General	556
6.4.2.2 Classification of coatings	557
6.4.3 Control of structure and properties of coatings	560
6.4.3.1 General	560
6.4.3.2 Models of coating deposition	560
6.4.4 Preparation of substrate for coating deposition	564
6.4.4.1 Requirements to be met by the coated surface	564
6.4.4.2 Initial cleaning	564
6.4.4.3 Final (ion) cleaning	565
6.5 Service characteristics of coatings deposited by PVD techniques	568
6.5.1 General	568
6.5.2 Decorative characteristics	570
6.5.3 Tribological properties	571
6.5.3.1 Coating of tooling and machine parts	571
6.5.3.2 Tool performance	573
6.5.4 Anti-corrosion properties	576
6.5.5 Optical and electrical properties	577
References	579
